

Seer

Computing Limited

Seer: *n.* 1. One that sees; specifically, someone able to see into the future; a visionary or prophet. 2. Someone possessing insight; a learned person or teacher.

Who are we?

Seer Computing Ltd is a Specialist Computer Training, Consultancy, Database and App Development Company.

We specialise in Oracle, Java, PHP, MySQL, JavaScript and CSS training as well as offering Oracle/Java Consultancy and App Development.

What do we do?

Specialist Computer training courses for IT professionals and end users who are required to operate, interact with and manipulate Oracle databases, Java Front Ends as well as the everyday usage of internet tools such as PHP, MySQL, JavaScript and CSS 3.

Innovative Oracle Consultancy in a number of key areas, including Management Information Systems, Data Warehousing, database procedures, legacy conversions and front end systems.

An In-house development facility to build anything from bespoke Android and iOS Apps to an entire migration from a legacy system.

Need occasional advice regarding direction of System Development?
Need to speak to Oracle Developers who have worked on some of the largest systems in the UK?

We offer the support of experienced consultants who can save you time and energy by giving you professional advice and direction.

Where are we?

Wherever you need the training or consultancy we will come to you, our clients' locations range from Aberdeen to Southampton and from Cork to Vienna.

Seer Computing App Development

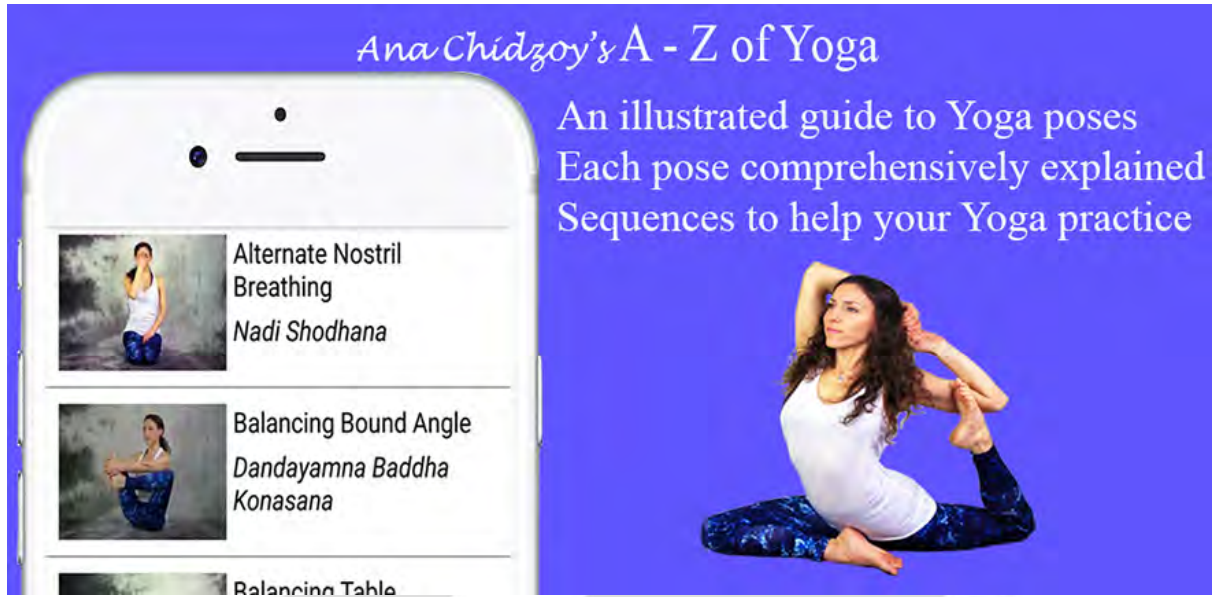

Seer Computing has released a number of Apps over the last year or so and have several others currently in development, some are designed to be used for leisure others are for Programmers to use within their working days

We are currently on the lookout for authors to collaborate with, if you have an idea but don't have the skills necessary to create quality Apps, please contact us, we can help design, build and sell your idea on both Apple Store and Google Play

Read our guides on App development

Your idea will be treated in strict commercial confidence, please contact us in the first instance, in the meantime, look through and download our current batch of Apps on the following pages.

A – Z of Yoga

[Ana Chidzoy's A - Z of Yoga](#)

A comprehensive, alphabetical and illustrated guide to Yoga poses. Over 150 poses examined and broken down into sections describing the pose itself, the feel of the pose and the contraindications of the pose

All poses have both their English and Sanskrit names and can be ordered by either, in addition, the poses are split into sub-groups outlining the areas they concentrate on such as Core, Chest, Balance etc ...

The Yoga A-Z app is available for both Android and Apple platforms, is usable on all screens from small smartphone up to tablet/iPad, it works in both portrait and landscape orientation.

The App can be viewed on YouTube ...

<https://www.youtube.com/embed/PMq5TxO7wM0>

[Android](#)

[Oracle SQL Functions](#)

How many times have you sat at your desk trying to remember that SQL function you need in your code ? even worse you know the name of the function but can't get it to work.

Simple functions such as FLOOR or ROUND tend to stick in your mind, but what about Deref or FIRST_VALUE or RANK, these functions are in some circumstances vital to your work but what if you can't remember them or need an example of its syntax ?

Our Oracle SQL Reference app lists all available functions, gives a concise explanation of each and at least one example of its usage, each accompanied with the output of the select statement.

The functions are listed alphabetically, but a pull down drawer splits the functions into their specific usage, therefore they are sub-grouped into the following key areas ...

- Number
- String
- Date
- Analysis

- Aggregate
- Regex
- Timestamp
- Misc

In addition we have added sections which our own Developers have identified as useful aids to the memory, therefore we break down the lists of Number and Date formats, list all the types of Where clauses, using aliases etc ... all very useful when writing SQL and PLSQL

The App can be viewed on YouTube ...

<https://www.youtube.com/embed/Uju66wFnZJw>

[SQL Functions App Download](#)

[iPhone](#)

[Android](#)

[MySQL Functions](#)

How many times have you sat at your desk trying to remember that MySQL function you need in your code ? even worse you know the name of the function but can't get it to work.

Simple functions such as CEILING or ROUND tend to stick in your mind, but what about STR_TO_DATE or REGEXP, these functions are in some circumstances vital to your work but what if you can't remember them or need an example of its syntax ?

Our MySQL Reference app lists all available functions, gives a concise explanation of each and at least one example of its usage, each accompanied with the output of the select statement.

The functions are listed alphabetically, but a pull down drawer splits the functions into their specific usage, therefore they are sub-grouped into the following key areas ...

MySQL Functions

- Number
- String
- Date
- Aggregate
- Regex
- Misc

In addition we have added sections which our own Developers have identified as useful aids to the memory, therefore we break down the lists of Date formats, list all the types of Where clauses and Regex usage etc ... all very useful when writing MySQL

App Development Guide

[A guide to having a successful Android and Apple App](#)

We are going to discuss the pros and cons of creating Apps, it is meant to help you decide whether you want to commission an App for your Business or for your personal interests, if you are intending to build your own then it may still be of some use to you as we discuss the pitfalls of App creation, ownership and hopefully answer some questions.

Why you need to have an App built?

Apps can fall into a number of different categories, is it going to be a useful utility, a means of promoting your Business, instructional App, a game or a way to publish your knowledge?

Bear in mind, Apps are not websites, they are separate entities and should provide a specific functionality or purpose, no-one is going to download your App if it just contains details that can be found on your website and they certainly won't pay for it if they can get it for free.

Apps can be used to duplicate the functionality of your main website, take for example the eBay website and its sister App, same processing but presented in entirely different ways, or an App can be used to produce unique functionality.

Remember an App is deliberately downloaded by a User, it is not accidentally come across when surfing the web, therefore the User has to want to have it on their machine, it must therefore appeal and be of use.

Once on the phone or tablet, the App Icon is there as a reminder to open and view its contents, indeed with notifications switched on the User can be 'nudged' to view the newest content

App Development Guide

What are the advantages of an App?

There are we believe a number of advantages to creating an App

1. A static App (ie one not needing to update off the internet) doesn't need a connection, therefore the contents can be read anywhere at anytime, take for example one that contains instructional videos, your User would not like to wait while the video is buffering.
2. It can be sold, Users can pay to download the App and its contents, free content on media sites is actually generating a lot of money for hosting Apps such as YouTube and Facebook, if you have information that is valuable to others, why are you giving it away ?
3. It can replicate certain aspects of your website, if for example you run an Estate Agency, property can be listed from your Database on a mobile device with the advantages of portability and GPS.
4. Apps appeal to all generations
5. It's World Wide, reaching a far wider audience than your current client base.
6. It's a great way to publish your knowledge and expertise, the turnaround is far quicker than if you choose the traditional method of publishing than paper and ink.
7. The sales side is taken care of for you; both Google and Apple stores facilitate the sale of your App paying you monthly.
8. An App can communicate with a server side Database, for example, salesmen in the field can enter the order details and these are written to the database when connected speeding up the invoicing and shipping processes.
9. App content is easily updated and can be synchronised with the main Database for the website.
10. An App is ideal for publishing information internally in the Company
11. Apps can be password protected.
12. Multiple language support from same App

App Development Guide

What are the disadvantages of creating an App?

1. Apps need to be built on the two main platforms, this requires two programming teams with different skill sets.
2. The submission of the App to Apple and Google stores is fraught with delays and minor irritations, websites are uploaded via ftp, Apps have to be submitted for approval.
3. Apps technology is a fast changing environment, existing Apps need regular updating

How easy is it to build an App?

App building requires high-end programmer skills, it is particularly exasperating that Android and Apple use different languages.

In addition, the main front end tools of Xcode and Android Studio build and store the App structures in entirely different ways and are not interchangeable

How easy is it to build an App? not very !!! couple this with the graphic requirements for icon and splash panels etc and you will agree it needs a specialist team (hint: Seer Computing)

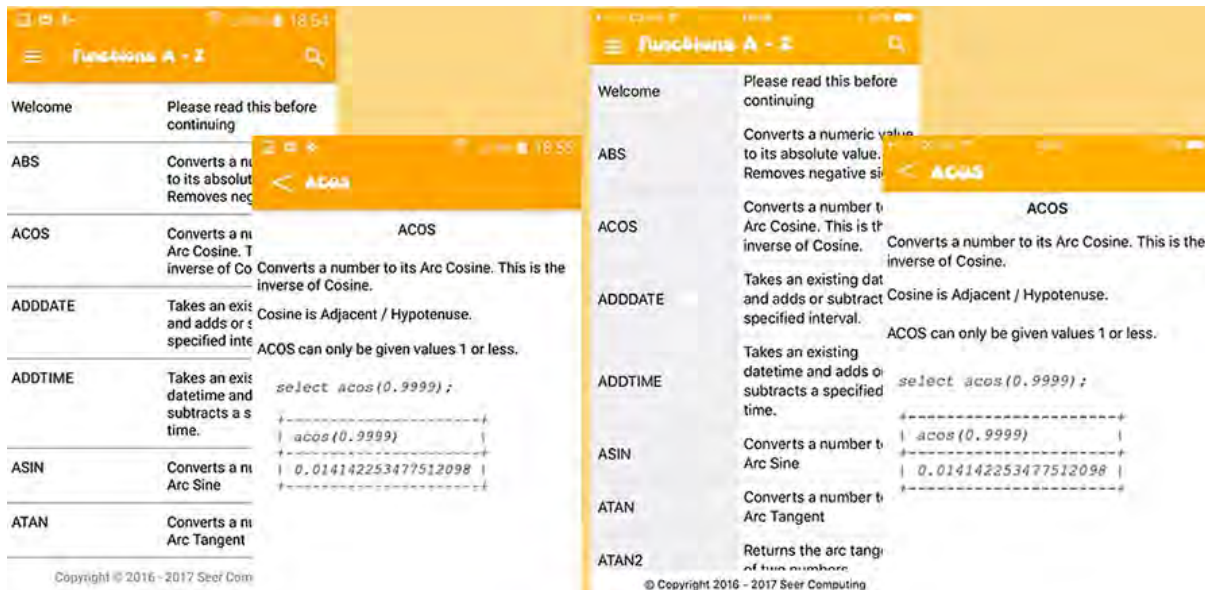

App platforms

There are two main Apps platforms, Android and Apple (iOS) operating systems.

Apple or Android?

The answer is normally BOTH !! Not only that, but Seer Computing recommend that the versions are synchronised so that they appear to be the same on both platforms even though they are essentially two different products.

App Development Guide

Two possible exceptions to developing on both platforms are when the App is specific to the platform's operating system, this would normally be only on Android as Apple are a lot stricter with 'OS amending' Apps.

A second exception is when the App is intended for 'internal' use, for example an Organisation has all Apple products and therefore no need to produce a version for Android (or vice versa)

How long will an App take to produce?

That depends on the App design, and the expertise of the Developers, Seer Computing has a number of templates which can be used to speed up the production, customising these is far faster than building from the ground up, however we can build from scratch when necessary.

Timewise it's a question of complexity and design, with Seer Computing providing the expertise, you can concentrate on the content.

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: apps@seercomputing.com

Web: <https://www.seercomputing.com>

App Development Guide

How much does an App cost to create?

Again that depends on the App design, some components are interchangeable between Android and Apple but they are normally confined to the content; data, images, video, audio etc...

Seer Computing have a number of costing algorithms ...

1. Time and materials costing
2. Collaborative costing / profit sharing
3. Maintenance costing

How can I make money from an App?

Aside from the promotional value of an App, Apps can provide you with an additional revenue stream; potential revenue can be broken down into three main areas ...

1. Initial Sale of the App

Apps are placed on the App Store (Apple) and Google Play Store, at submission the Developer can specify the price of the App, these are in your home country currency but will be converted for the market it is being displayed in. Any revenue from sales is subject to a percentage going to Apple or Google, if the App is free then it is still displayed by the Stores.

2. Internal Adverts

Free Apps can contain adverts (paid Apps can't), the App needs to be modified to include the display of adverts, rather like adverts on websites these are strictly controlled by both Apple and Android regarding their frequency and placement, deliberate attempts to make the User accidentally click on an advert will get the App removed. Revenue is by pay per click and again subject to a percentage going to Apple / Google.

App Development Guide

A different way of advertising is sponsorship within the App from interested third parties, this cannot be pay per click but gives the owner the opportunity to sell real estate on the App

3. Additional add-ons within the App

Games in particular use this method, additional levels etc can be purchased and installed into the App, some games for example offer power ups, Newspaper Apps offer additional content to subscribing Users.

App Development Guide

How do I promote my App?

Both Apple and Google stores will promote the App within their products, to this end a large number of screen shots need to be created and a comprehensive write up of the product.

Additional promotion of the App will be needed as there are millions of Apps on the stores, so your website will need to have links to the download pages as well as promoting on social media and other forms of advertising if the budget runs to it.

What happens after an App has been released?

In theory an App whether on Android or Apple can be maintenance free once released; Dynamic data can be updated and extracted from a website-side database without releasing a new version of the App, however App development is a relatively new area in Computing and both Android and Apple are regularly updating and improving their underlying development tools as well as the programming languages. Each release is deprecating earlier versions of processes making them obsolete rather than supporting for a little while for Developers to upgrade gradually.

What this means is that Apps that are live work perfectly, but Apps in development or being updated need to be amended to take on board the new changes and these changes tend not to be piecemeal, Apple in particular is prone to removing functionality of processes and replacing them with new versions or totally different ones, one of our live Apps had over 90 compilation errors when opened for updating ... most are five minute fixes, some are not, what we are saying is that maintenance is a necessary component in the life-cycle of an App and cannot be ignored.

Changes in Operating Systems is also a factor to keep in mind, Android has over 25 versions, a decision needs to be made how far back to support, our

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: apps@seercomputing.com

Web: <https://www.seercomputing.com>

App Development Guide

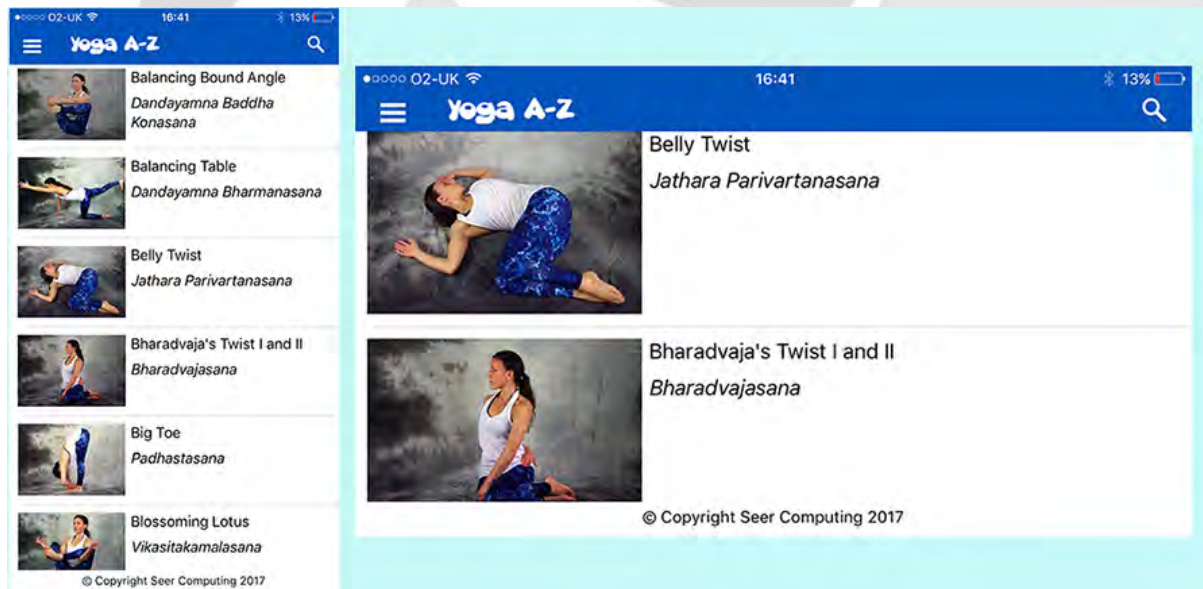

Apps work on all Apple products from iPhone 3 onwards, the Android versions will work from 'Ice Cream Sandwich' (14) onwards, some innovations in newer versions are coded to allow for older Operating Systems (in other words we have to bypass the process)

Other Considerations

In no particular order you should consider the following ...

Orientation of an App

By default an App will turn from portrait to landscape and back again when the machine is rotated without any programming by the Developer, however care must be taken to preserve the perspective of the elements on the screen, elements such as images and buttons etc will distort in relation to text etc ...

App Development Guide

The Developer has the option to fix the orientation permanently to resolve this issue, Newspaper Apps are mostly portrait, whereas Games are nearly always landscape. Alternatively spend a lot of time making sure the orientation changes work smoothly, a good example is our A-Z of Yoga, check out the way we handle the images and text

Screen size

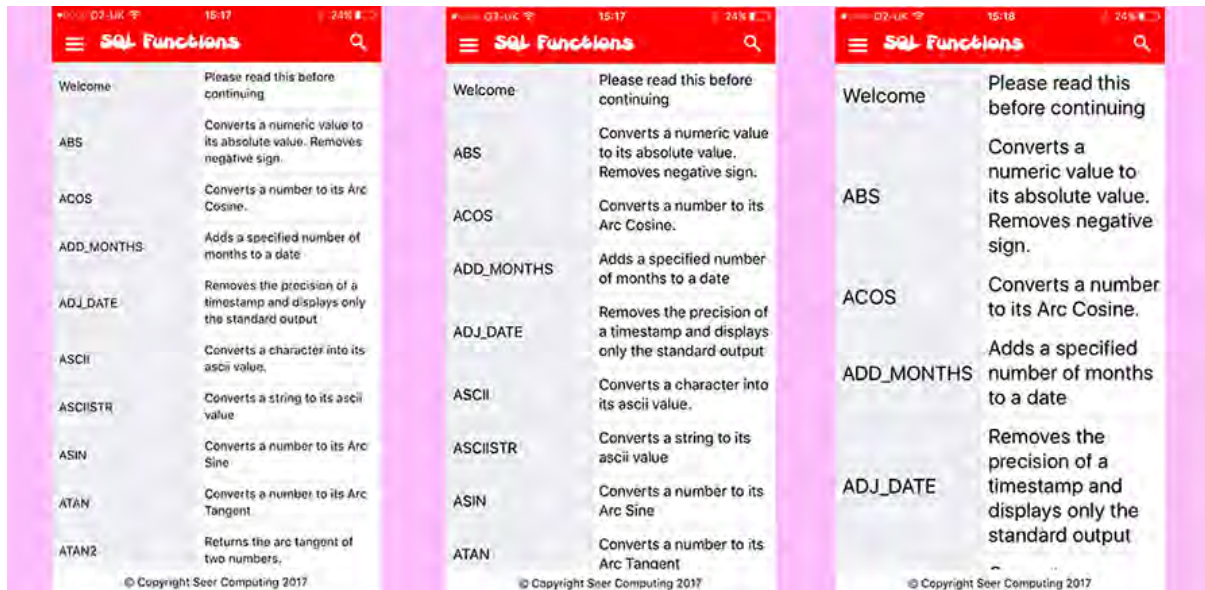

Machines come in a variety of size screens, the App will need to 'adjust' so that the designed screen displays fully, images for example are best handled by proportionately applying them to the screen, therefore if an image is made 30% of the visible screen and tacked to a side this automatically adjusts to the screen size.

Text sizing is handled in two different ways by Android and Apple

Android's method is fairly mechanical in its approach, each size screen is assigned attributes which can be applied to text (and other elements), size is then assigned at runtime. Testing is key with this methodology.

Apple has functionality within the Operating System which allows the User to adjust the preferred text size for all Apps installed on the machine, this is termed 'Dynamic Type' and Developers need to take this into account. To complicate matters, if the text size is changed while the App is running the App should refresh to take on board this change, its complex and time consuming but Seer Computing has mastered this...

App Development Guide

Functionality

A lot of the functionality that Users are used to in an App, have to be programmed in, 'left to right' swipe to return to previous screen for example doesn't come 'out of the box', menus have to be built in and all clicks on buttons have to be detected and acted upon.

Usability

Whilst we applaud innovation in App design, remember that an App that works significantly different to all others might turn Users off, therefore avoid putting too many 'idiosyncrasies' in the design.

Images

Images come in a variety of sizes and filetypes, in our development we use photoshop to shrink large images down to a more workable 800 pixels along the longest side (consistency across all images is essential) converting to jpg or png at the same time, in testing a maximum of 40 images can be added to a listview at any one time unless thumbnails are created, there are over 150 yoga postures so we used thumbnails in this example ...

App Development Guide

Videos

Like images the limits of size constraints can soon be reached, in one build we are currently developing we have installed a series of instructional videos of over one hour duration.

What can Seer Computing do for me and my App aspirations?

1. Support and build on Apple and Android platforms
2. Platforms guaranteed to be synchronised with each other
3. Professional service from design, build, release through to maintenance
4. Video and audio facilities
5. Image processing
6. Database design experts to handle bulk data
7. High levels of support
8. Enthusiasm !

Bespoke Apps

Bespoke App Development at Seer Computing

You may have been thinking about creating an App and suddenly realise the specialist skills needed to create them is expensive with a high and steep learning curve, not to mention the maintenance and submission to the App Stores overheads

Apps come in all shapes and sizes; games, utilities, leisure, business to name but a few types of application and exist on two main Operating Systems, Android and iOS, Seer Computing concentrates its talents on these platforms.

General Comments

Here we discuss various aspects of Apps and Seer's approach to them

App Platforms

Seer can build and synchronise Apps on the two main operating system, iOS and Android, either or both (the norm)

Production Timescales

We will agree 'go live' date before production commences and stick to them, we have intimate knowledge of the man effort needed to create the product and will Project manage our production and your content.

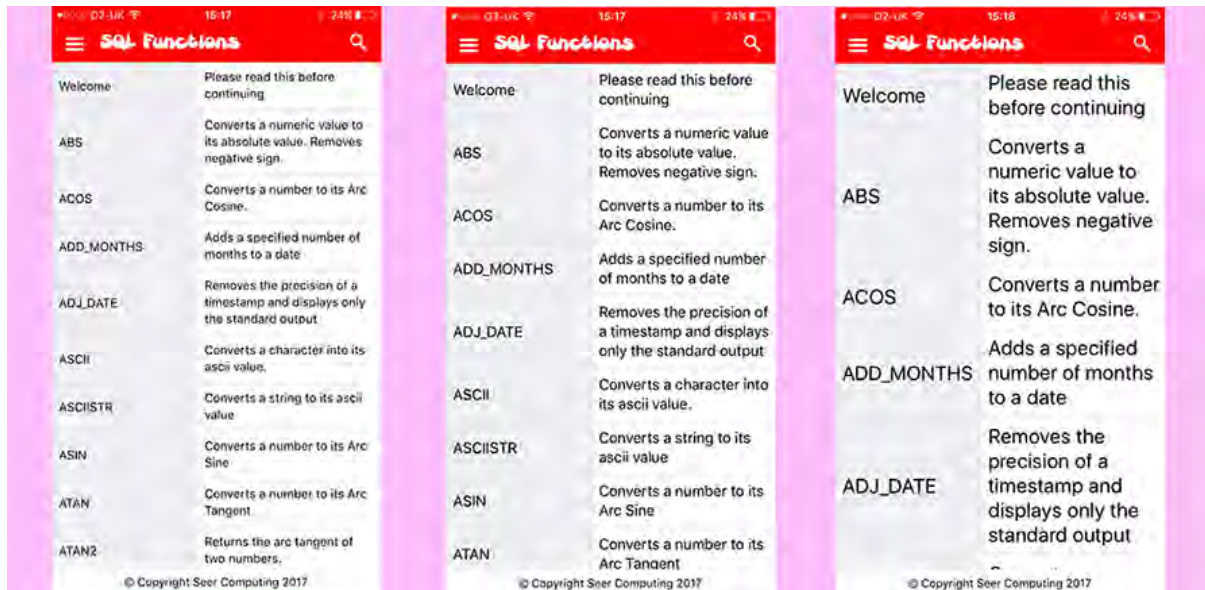

Language Variants

If the App needs to be in additional languages Seer can facilitate the translations, or incorporate your translations

Visual impaired

Apps can be created with variable text sizes to allow the reader to adjust the view to their requirement.

Bespoke Apps

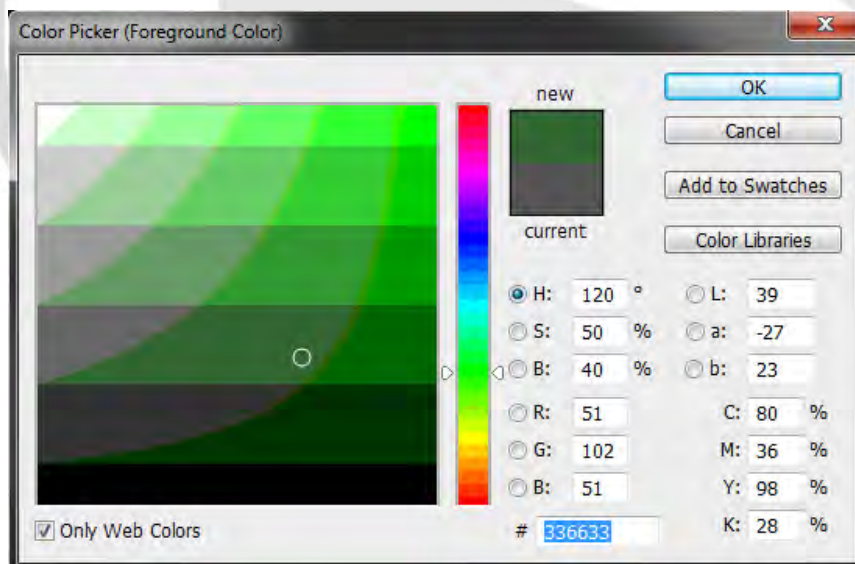

Media

Images, audio, links and videos can be incorporated into the App as well as text

Style

- Colours - The HTML colour palette is yours to choose from

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: apps@seercomputing.com

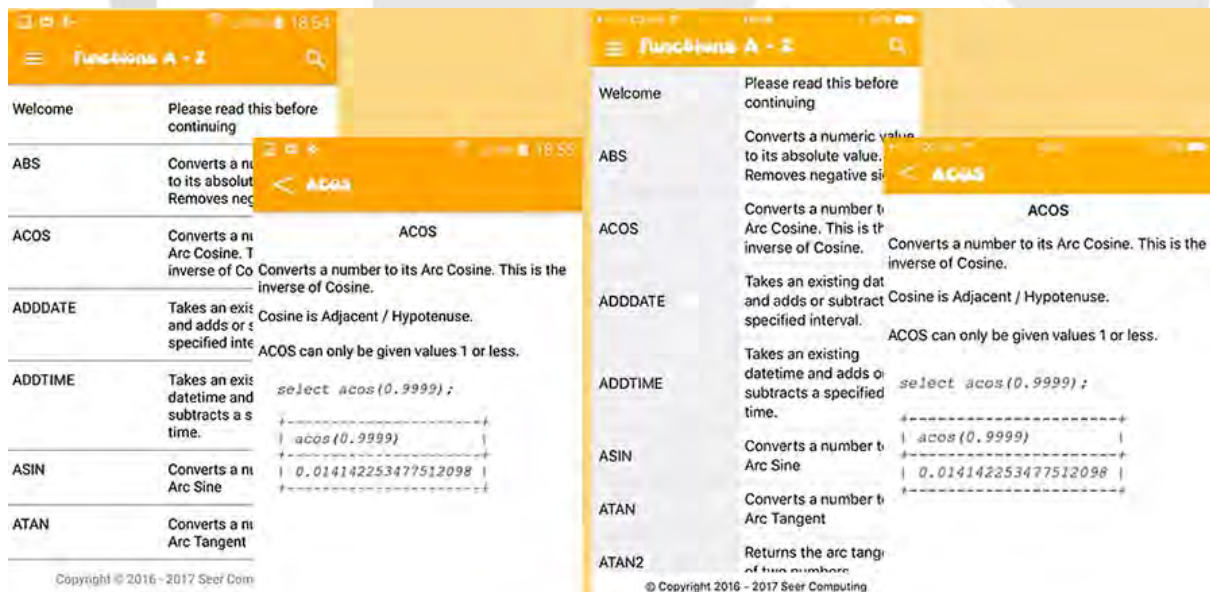

Web: <https://www.seercomputing.com>

Bespoke Apps

- Icons - we can create any App icon you need, it could be your Company logo or new image for your concept, it needs to be a variety of sizes for the different platforms and machines.

- Synchronised Apps - The App will have the same functionality and style on both Operating System (unless differences are requested)

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: apps@seercomputing.com

Web: <https://www.seercomputing.com>

Bespoke Apps

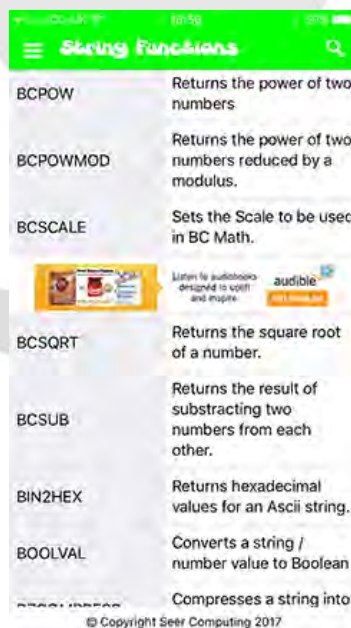

Security in Apps

Security can be broken down into the following areas ...

1. Internal Apps - their distribution is limited to a Company therefore no-one outside the Company can access the information, as a double safety feature when a Database is involved only installations of the App with the correct internal numbering will be able to access the data
2. Members only section - A publically available App can be created with a member login section for more information etc ...
3. Registration only - An App can be downloaded but its contents are not available unless the User registers their details, a further detail could be the registration can be checked against a list of agreed Users
4. No security - The default, whoever downloads the App from the appropriate App Store can see all of its features

Adverts in Apps

A potential source of income, these pop up adverts for other Companies can be a double edged sword, we can configure your App with adverts but the App cannot be sold they need to be made free on the stores, unless your App is a Newspaper / Magazine with thousands of Users per day the irritation of Ads popping up may out-way the revenue received from them.

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: apps@seercomputing.com

Web: <https://www.seercomputing.com>

Bespoke Apps

Dynamic or static Apps

A self-contained App has information which doesn't need to be updated can be created as a static App, basically this is the most economical approach to an app as an external database will not need to be maintained, the downside is that the App will need to be released each time a change is made to the data, this would not be a problem if the App is a catalogue or a reference module.

Static Apps do not need Wi-Fi access / network connection to function

A Dynamic App is the most flexible of the designs in that the details within the App can be updated by changing information in the Database, the App will download the changes the next time it is opened on the handset/tablet, this design suits applications with articles etc, the downside is that the external Database will need to be maintained and therefore there is an additional workload.

Dynamic Apps will need Wi-Fi access / network connection to download new information

App Development for Companies / Organisations

Why choose Seer Computing ?

Seer Computing has been in existence since 2000, it's an established Computer Consultancy specialising in Database systems, when you design and build Databases such as Oracle, SQLite and MySQL you should create fantastic front ends to go with them, nowadays the front ends are created with Java, PHP, HTML and of course Apps.

Android Apps use Android Studio with Java and XML languages, modern iOS Apps use XCode with Swift and a smidgeon of Objective-C.

Seer Computing are experts in these products, couple that with our professional approach to Projects and you have a winning combination.

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: apps@seercomputing.com

Web: <https://www.seercomputing.com>

Bespoke Apps

We believe that a Company App can be either internal (in-house app) or external or with the appropriate security elements, a combination of both

What can you use your app for ?

Well the sky's the limit, but here are a few suggestions ...

1. Store / Office locations with GPS
2. Current news and information
3. Product information
4. Contact information
5. Instructive videos for installation of products
6. Operating Instructions for products
7. Exclusive sale details
8. Diary details
9. Statistics, facts and figures
10. Appointment booking
11. Management Information, facts and figures
12. Salesperson support

Internal or External App ?

Internal

Maybe you need to have a mobile app for your Employees to access important information, input data or perform business calculations when away from the office. Apps can be installed 'locally' on machines without using the App stores, with secure access to Database information shared only within your Organisation, confidential information can be published on the App

External

Having a website is just the first step to communicating with your Clients, customers and associates, an App will allow you to rapidly publish information and notify the App Users that you have updated the App

Bespoke Apps

An App is carried by the owner 24/7 on their phone, it is there as a constant link to your Company and will serve as a reminder of your existence, what other promotional product can guarantee that ?

What do you want in your App ?...

App Development for Individuals

One of the frustrations of being creative is sometimes you conceive the ideas but not have the abilities to actually create the concept. We can help you make your brainchild a reality

Design and Analysis stage

Consultation sessions will be subject to a non-disclosure agreement so that protects your intellectual property, if you are really concerned that your product is the new Facebook or Tinder then we would advise you to register the idea via a solicitor before disclosing the concept to any third party, any idea that you come to us with must be your original concept

The design stage is when we will evaluate your concept and break down the steps necessary before production can commence, this will be followed by a formal agreement based on that evaluation

Production stage

Adhering to agreed timescales Seer Computing will manage the App project making sure all tasks are completed and signed off, you can test production stages at agreed intervals

Release stage

Once the App has been completed on both platforms to your satisfaction and signed off, Seer Computing will submit the App to Google and the Apple Play store

Bespoke Apps

Maintenance and Lifespan stage

It may well be that the App has a natural lifespan, an App to promote a Concert in the next year will obviously be redundant following the event taking place, some Apps however can be valid for years, the maintenance of these will be agreed during the Design and Analysis stage, this is particularly important when taking into account new releases of the Operating Systems.

Location

Location is not a problem, we are based in South Wales but following an initial consultation most matters can be resolved via telephone and email, the only exception to this would be the production of images and video, Seer Computing has a mobile studio facility which enables us to produce high quality video and pictures. If you can produce your own high definition media we are more than happy to incorporate that, our editing facilities will ensure consistency and quality

Funding

There are a number of different ways that we can fund the construction of your App

1. If you are able you can pay us by the time and materials method, this means you keep all the profits from the product
2. Current news and information
3. A partnership between Seer and yourself, if we evaluate the idea and no funding is possible we may agree a percentage split of any profits in order to get the concept into production
4. Private/Public funding, again if we evaluate the idea but it is of such a nature that time and materials will be high we will associate with you to produce a bid for external funding

So get in touch, we can discuss your concept and plan the execution of its build

The Papers and Periodicals App Solution

Changing the way you present your data in the digital age

The use of Apps is becoming increasingly important for information and news dissemination.

This is particularly true for the younger generation but all generations are embracing using handsets to keep up with news instead of reading the printed word

The PAPA Solution has been created to give a highly customisable App for publishing your news and articles but importantly it is a template with all the many components already created and ready to be published, therefore saving lead time and development costs.

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: apps@seercomputing.com

Web: <https://www.seercomputing.com>

The Papers and Periodicals App Solution

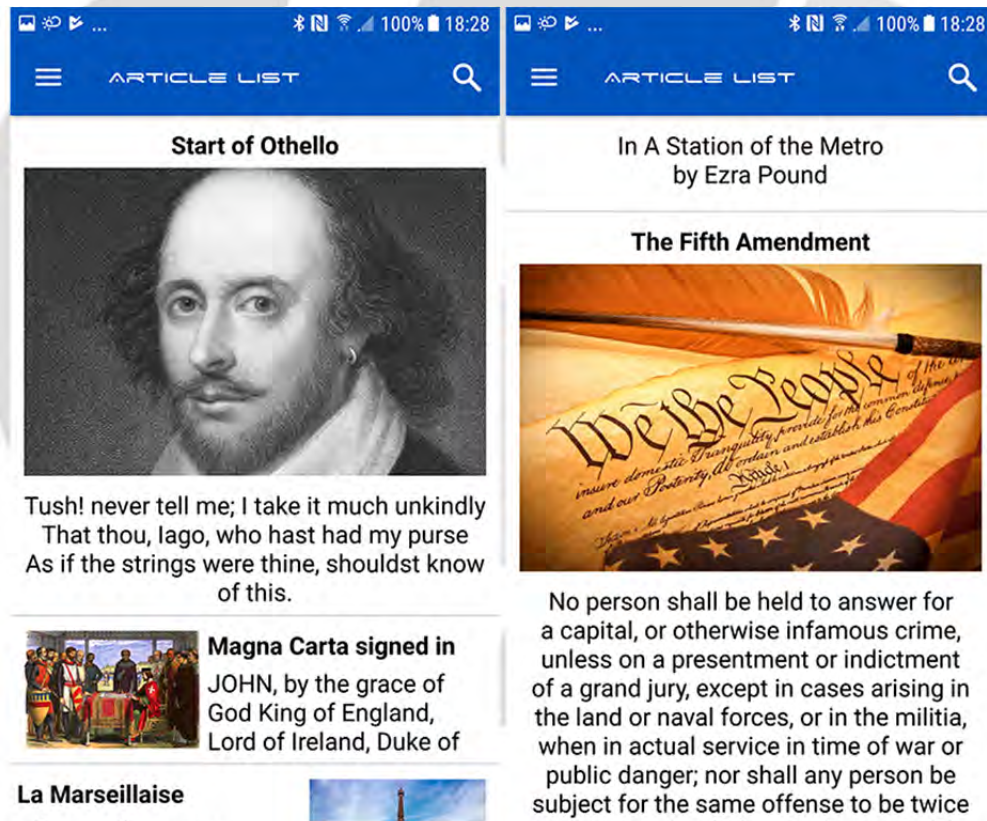

"Just add data"? ...

not quite, but we have the expertise to incorporate your data into our system,
with over 30 years of Database experience

We'll talk more about your data when we arrange a conference call or come to
your offices to make a presentation about the PAPA solution

What does the PAPA solution have as standard ?

- Scrolling list of articles for the User to select, this list can have a variety of differing layouts according to the type of article, these lists can be grouped in a series of menu options ...

The Papers and Periodicals App Solution

- Customisable menus, helps the User to navigate to the topics they are interested in

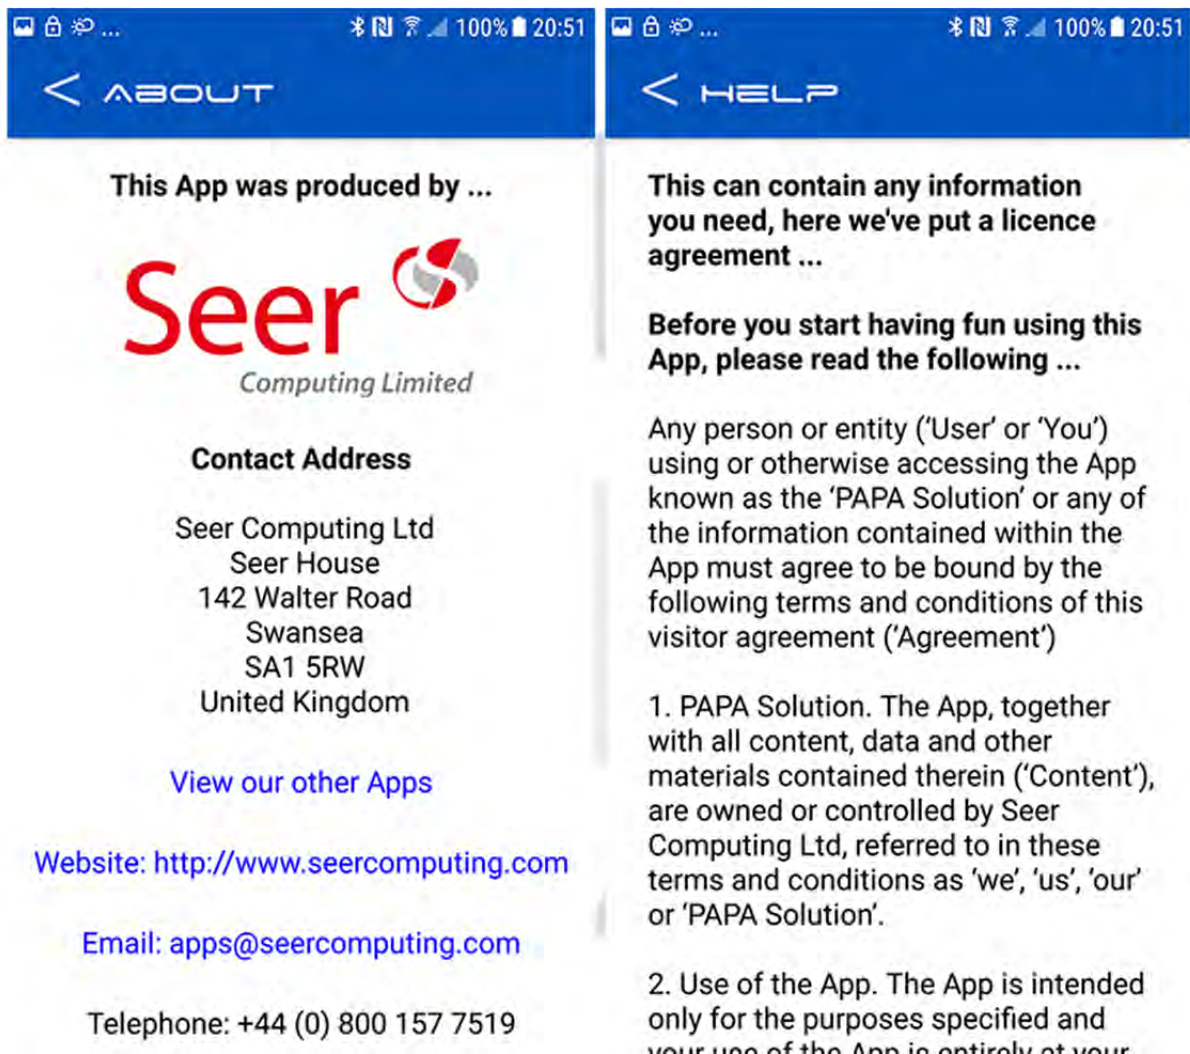

- Custom colour schemes and iconography, we can match to your Corporate colours and incorporate your logos
- Choice of fonts with sophisticated font size handling for different machines

The Papers and Periodicals App Solution

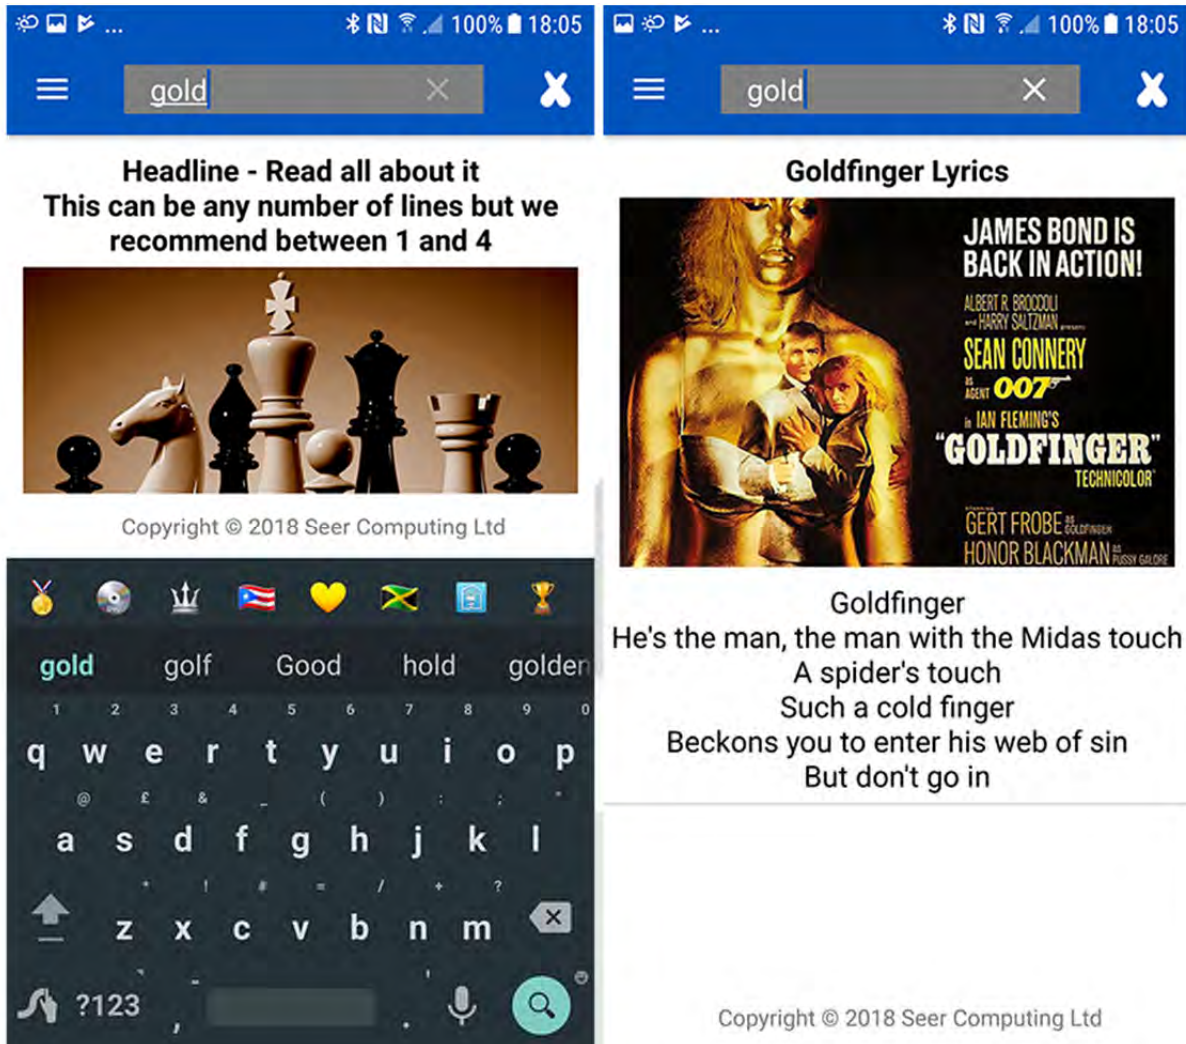

- Areas for help, information and contact details

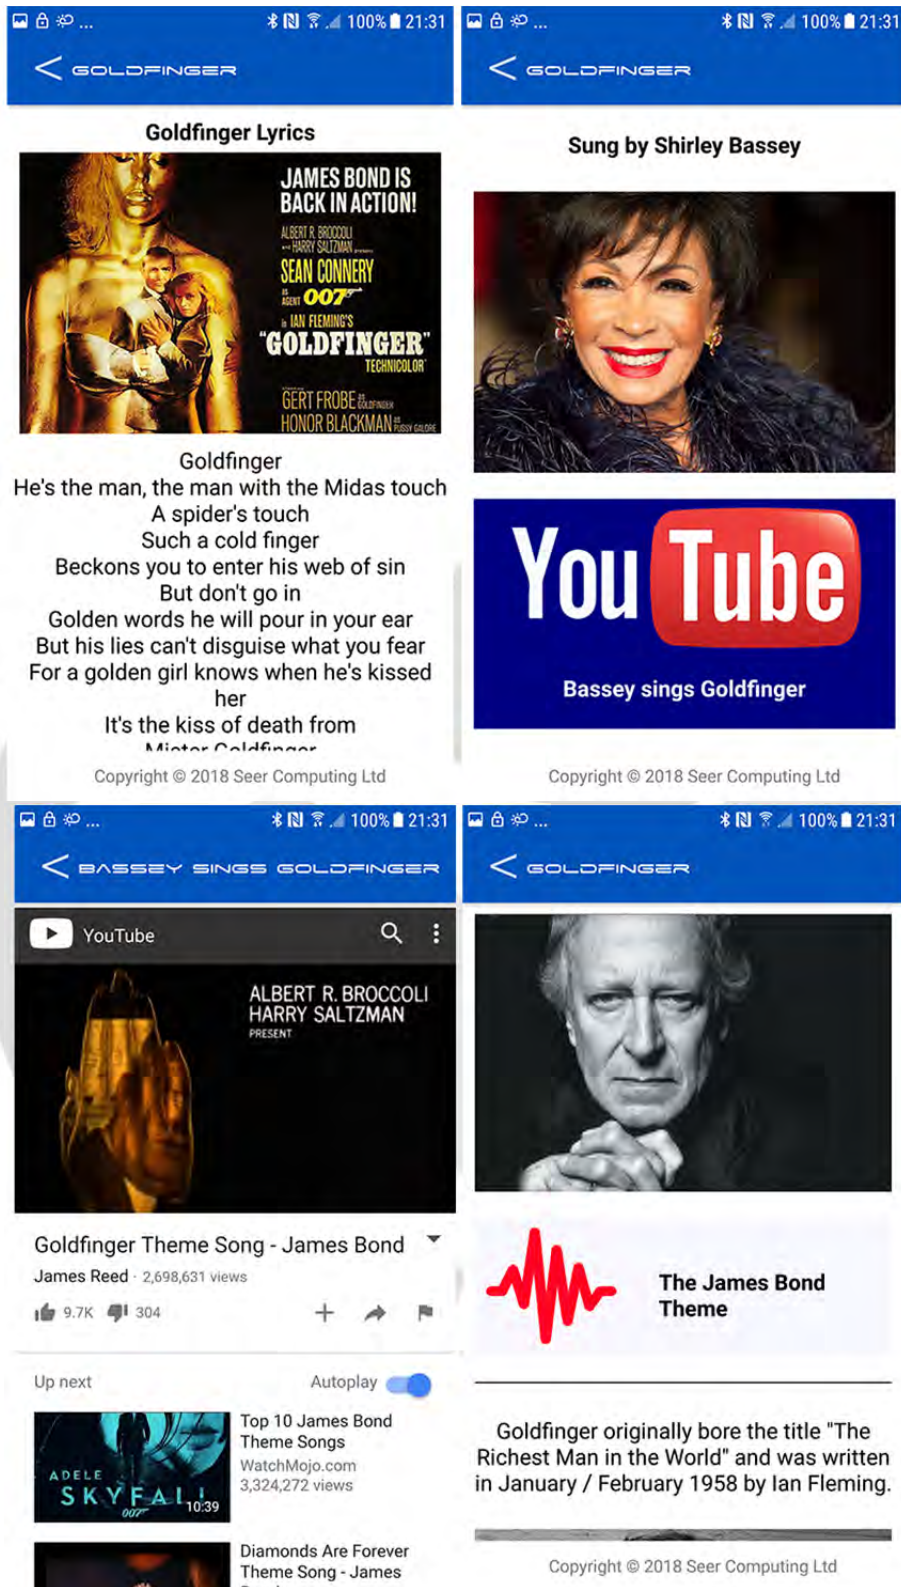

The Papers and Periodicals App Solution

- Search for articles

- Within the articles themselves, as well as a greater expansion of text, the following can be incorporated ... videos, images, sound clips, links to websites etc ...

The Papers and Periodicals App Solution

The Papers and Periodicals App Solution

Customisations ?

Well, aside from custom menus, colours, article layout, fonts etc what more can be added to the stock solution ? Here are a few ideas and suggestions ...

- Geolocation - Do you need to give a location relative to the User of your nearest office, warehouse or representative ?
- Comments - open up your articles for User to like / dislike, score or make comments
- Private section - A members only area with exclusive paid for access or simply an area for employees to see internal news
 - Voting - Maybe you need a collective opinion on issues
- Back Catalogue - Publishing previous issues of a periodical is a great way to generate revenue

The Papers and Periodicals App Solution

Having decided on publishing via an App, what can Seer Computing offer you ?

Aside from using the PAPA solution as the base product with the potential customisations listed as above, Seer Computing offer the following as part of their standard professional approach to your App ...

- Management of your App on both Android and iOS platforms
- Incorporation of software upgrades when necessary
- 24/7 advice and support
- Free initial consultancy and advice
- Expertise in Database and large information systems

In addition Seer Computing can offer a varying scale of support for your App ranging from image re-profiling, multilingual support to proof reading

All of the previous examples featured the Android version of the PAPA solution, the website video runs briefly through the iPhone (iOS) version ...

On-Site – Training made easy

At your Venue training – Have wheels will travel

On-site training from Seer Computing means we deliver any of our in-house built training courses to you at your preferred location / venue. We handle everything from start to finish, bringing each delegate an individual machine to learn on.

All on-site training courses are delivered by skilled professional instructors to the highest industry standards, are hands-on and specifically tailored to your company's needs. Together, we can achieve lasting results with our on-site CSS3, JavaScript, Java, PHP / MySQL and Oracle Training courses.

How flexible is on-site training?

Each on-site training course is totally customisable. Courses can be shortened or lengthened in duration according to the delegates' individual experience, backgrounds or work schedule.

All our on-site training courses can be presented at any location in the UK, Ireland and Europe commencing on days that suit you.

On-Site – Training made easy

Why choose on-site training? is public training better?

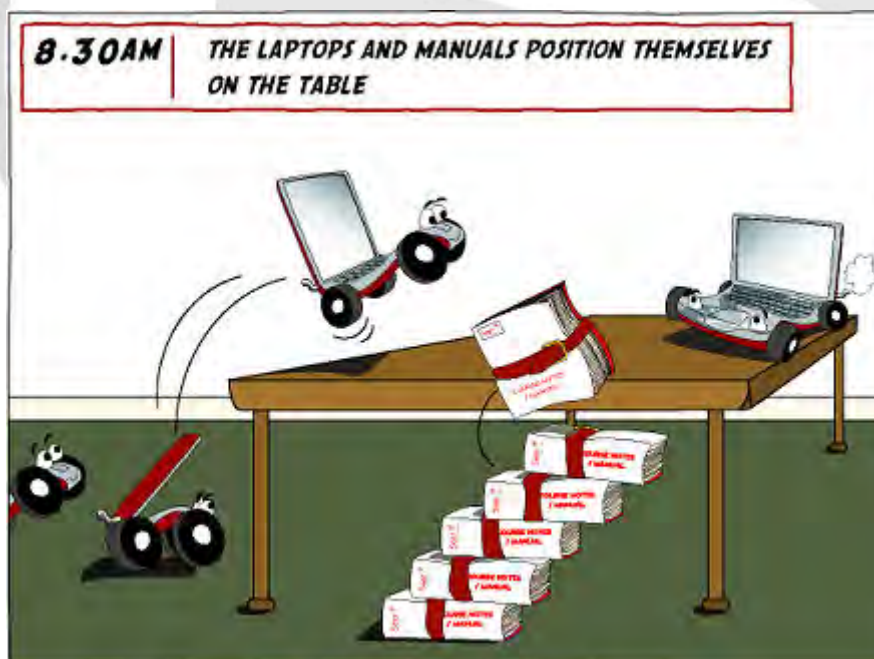

With on-site training, we do the travelling and you don't. It's all part of the service and means no unnecessary travel time for you or your colleagues and no extra budgetary burdens. Time away from current projects is minimised and your team is already in a familiar working environment which can encourage learning, and which can also bring a new-found synergy to your team.

Plus, when you have more than a few people to train, delivering on-site training can help you can reap massive savings on the total costs of going off-site or on public training courses.

We need an on-site training course but we've got a massive project deadline

No problem. You drive the content and timings for the duration of the course and choose your stops to fit in with your schedule, not ours.

On-site training courses from Seer are all about flexibility as well as getting the most out of learning

Seer House 142 Walter Road Swansea SA1 5RW

Email: training@seercomputing.com

Web: <https://www.seercomputing.com>

On-Site – Training made easy

How we set up your CSS3, JavaScript, Java, PHP or Oracle Training course

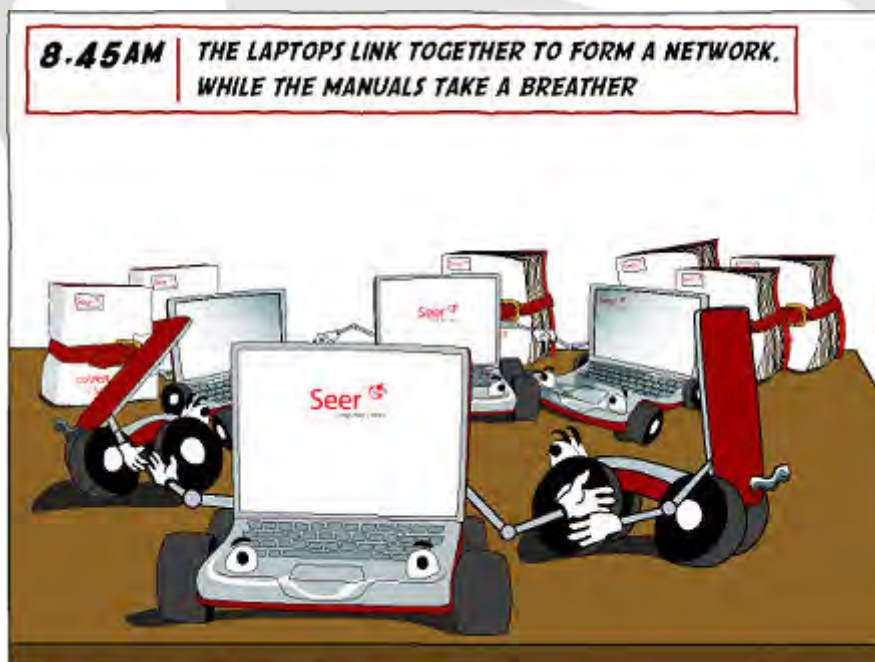

When you choose an on-site training course from the experts at Seer Computing, our set up is totally seamless. It just takes your trainer half an hour to set up the room - we just need tables, power and optionally, a flipchart.

Your Seer on-site training course means you don't have to worry about a thing - we bring all the laptops, Oracle database (when needed), top quality training manuals and materials with us, all primed and ready to get started and there are no networking security issues with our client's computer systems.

Spare machines are always brought with the consultant for back-up.

How many people can be trained at one time?

There are no limitations to the number of people who can attend a course, but we find you will get the most out of your training if you have groups of between 1 to 12 people.

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: training@seercomputing.com

Web: <https://www.seercomputing.com>

On-Site – Training made easy

Are there any hidden costs with on-site training?

Absolutely not. When you use Seer Consulting, all our costs are 100% inclusive. No travel bills, no set-up charges.

Everything is part of the deal from the manuals to the materials, the instructor's skills to the tear down at the end of your course.

No minimum number of delegates on the course but a minimum price for a range of numbers.

How do I book a Seer Computing course?

It's simple. To book we just need a purchase order or payment by bank transfer, draft, cheque or via PayPal.

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Public Training

Public training courses are held throughout the UK and Ireland at regular intervals throughout the year.

[Belfast](#)

[Birmingham](#)

[Bristol](#)

[Cardiff](#)

[Carlisle](#)

[Cork](#)

[Dublin](#)

[Edinburgh](#)

[Leeds](#)

[London](#)

[Manchester](#)

[Newcastle](#)

[Swansea](#)

Delegate numbers are restricted to a minimum of one and a maximum of six people per course.

Each Delegate has their own individual workstation and a set of manuals which are supplied with solution CDs as part of the course.

Courses are generally held in City centre based conference facilities with ample parking and public transport access, buffet lunch is provided as well as tea and coffee throughout the day.

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: training@seercomputing.com

Web: <https://www.seercomputing.com>

Public Training

Courses start at 9am and finish at 4.30pm with ample comfort breaks during the course.

Each course has a number of exercises built into the course for the Delegate to practice the techniques set out in the presentations.

The following are courses given at public venues; view the locations above for the dates when they are being held

[Oracle SQL Developer 18.2 training course](#)

[Oracle Essential SQL 18c training course](#)

[Oracle Essential PLSQL 18c training course](#)

[Essential CSS 3 training course](#)

[Essential JavaScript training course](#)

[PHP 7.1 and MySQL 5.7 training course](#)

[Essential MySQL 5.7 training course](#)

[Essential SQLite 3 training course](#)

[Java 1.9 Programming with Eclipse Oxygen training course](#)

[Java 1.9 Swing with Eclipse Oxygen training course](#)

Oracle Training

These next pages outline the Oracle Training Courses that Seer Computing Ltd provides, these are in addition to the mentoring sessions that we give and the System Health checks we undertake.

Some of the courses outlined can be presented at weekends, if that is a requirement of your Organisation, we can also undertake to present the courses using data which relates to your particular Company.

Public courses are given in some of the courses throughout the year and throughout the UK and Ireland, please contact us or look at our web site <https://www.seercomputing.com> for up to date information on the schedules.

The Oracle Training courses cover all the latest versions of the Database from 9i to 18c.

Oracle SQL Training

Oracle Structured Query Language at a variety of different levels, for the occasional user right up to the professional Developer who needs to know the latest innovation of Oracle SQL 18c.

From a one day SQL for Users course to a full five day Oracle 18c SQL course.

Seer Computing offer the complete course range for Oracle SQL training in the UK and Ireland.

Oracle Essential SQL 18c

Duration:	2 Days	On-Site:	✓
No. of Exercises:	8	Public:	✓
No. of Sections:	15		
No. of Pages:	340		
Webpage:	https://www.seercomputing.com/essential-sql-for-oracle-18c-training-course.php		

Synopsis for Oracle 18c Essential SQL training course

SQL is the foundation of all Oracle database commands, this ranges from the initial creation of the Oracle Database, creating Database objects to manipulating the data the Oracle database contains.

This course is essential for anyone who needs to work with an Oracle database, the first day concentrates on the User side of SQL; Selecting columns, using where clauses, manipulating data using SQL Functions etc...

The second day introduces advanced SQL query techniques such as in-line tables, then it moves onto creating Oracle Database Objects such as Tables, Views. We discuss indexing strategies to increase the efficiency of the Oracle Database.

By the end of the second day you will have mastered Oracle SQL as a powerful and productive programming tool.

This training course uses a Oracle 18c database, Seer Computing can provide a similar training course using an Oracle 12c, 11g, 10g or even an Oracle 9i Database, use the pull down menu to view the versions.

In addition, there are versions of the course using the Oracle SQL Developer product.

Contents highlights (Learn this and much much more ...)

Oracle 18c Database Objects including invisible and virtual columns

The Oracle 18c SQLPLUS interface

Creating Indexes for Oracle Tables

Manipulating data in an Oracle Database

Using Advanced functions such as Pivot and Listagg

Querying from Multiple Oracle Tables

Exercise highlights (Plenty of time to practice what you have learnt)

Selecting from Oracle Tables

Using Ansi/99 joins between tables

Limiting records with where clauses and fetch

Creating Oracle Database Tables, Views, Sequences etc

Oracle Essential SQL 11g

Duration:	2 Days	On-Site:	✓
No. of Exercises:	8	Public:	✗
No. of Sections:	15		
No. of Pages:	328		
Webpage:	https://www.seercomputing.com/essential-sql-for-oracle-11g-training-course.php		

Synopsis for Oracle 11g Essential SQL training course

SQL is the foundation of all Oracle database commands.

For end users SQL will often only be used as a simple method of retrieving records, however, Developers who master advanced statements can use it as a powerful and productive programming tool.

Contents highlights

Oracle 11g Database Objects including virtual columns
Accessing Oracle 11g using SQL Plus
Using Sequences for number generation
Oracle 11g functions including ntile and width_bucket
Using rollup with Oracle 11g
Merging tables in Oracle 11g using Merge, Union and Intersect

Exercise highlights

Creating tree walks in Oracle 11g
Using Ansi/86 joins between tables
Updating records with the set statement
Linking tables with foreign keys

<https://www.seercomputing.com/files/index-essential-sql-11g-training.pdf>

Advanced Oracle SQL 11g

Duration:	3 Days	On-Site:	✓
No. of Exercises:	12	Public:	✗
No. of Sections:	28		
No. of Pages:	699		
Webpage:	https://www.seercomputing.com/sql-11g-advanced-training-course.php		

Synopsis for Advanced Oracle 11g SQL training course

A supplement course for experienced SQL Developers using SQL in a 11g Database, please refer to the index for this course at the bottom of the page for full details.

Contents highlights

Regular Expressions
Sub-Queries with Group Clauses
Using Ansi SQL/99 Joins
Advanced ordering of siblings in Tree Walks
Populating tables using Merge and Multiple Inserts
Using External Tables
Flashbacks
Object Orientated Programming

Exercise highlights

Using Oracle Multiple Inserts to populate Tables
Creating and manipulating Tables with Timestamps
Using Flashback to retrieve values
Creating Correlated Sub-Queries

<https://www.seercomputing.com/files/index-advancedsql-11g-training.pdf>
<https://www.seercomputing.com/files/example-advancedsql-11g-training.pdf>

Oracle Essential SQL 10g

Duration:	2 Days	On-Site:	✓
No. of Exercises:	8	Public:	✗
No. of Sections:	15		
No. of Pages:	299		
Webpage:	https://www.seercomputing.com/essential-sql-for-oracle-10g-training-course.php		

Synopsis for Oracle Essential SQL 10g training course

SQL is the foundation of all Oracle database commands.

A powerful and productive programming tool, SQL can be used by both Users and Developers to access and manipulate Oracle 10g Databases.

This course covers the Essential skills needed by both to use the Oracle 10g Database on a day to day basis

Contents highlights

Creating Objects as a User, tables, views, sequences and indexes

Using SQL Plus in an Oracle 10g database

Improving access times in Oracle 10g

Manipulating data in an Oracle 10g Database

Using Case statements

Exercise highlights

Selecting from Oracle 10g Tables

Truncating tables in Oracle 10g

Outputting selections into Operating System tables

Selecting records using where clauses

<https://www.seercomputing.com/files/index-essential-sql-10g-training.pdf>

Oracle SQL 10g

Duration:	5 Days	On-Site:	✓
No. of Exercises:	12	Public:	✗
No. of Sections:	20		
No. of Pages:	449		
Webpage:	https://www.seercomputing.com/sql-10g-training-course.php		

Synopsis for Oracle 10g SQL training course

An intense five day course designed to prepare Delegates for programming in an Oracle 10g Database, when combined with the Oracle 10g PLSQL course.

This course will give Delegates a complete knowledge of SQL in Oracle 10g databases.

Contents highlights

Oracle Database Objects
The SQLPLUS interface
Indexing Oracle Tables
Inserting Records using SQL
Updating Oracle Records
Querying from Oracle Databases
Flashbacks
Timezones

Exercise highlights

Selecting from Oracle Tables
Multiple Oracle Table Querying
Manipulating Table Data
Creating Oracle Database Objects

<https://www.seercomputing.com/files/index-sql-10g-training.pdf>

Oracle Essential SQL 9i

Duration:	2 Days	On-Site:	✓
No. of Exercises:	8	Public:	✗
No. of Sections:	15		
No. of Pages:	298		
Webpage:	https://www.seercomputing.com/essential-sql-for-oracle-9i-training-course.php		

Synopsis for Oracle 9i Essential SQL training course

SQL is the foundation of all Oracle 9i Database commands.

For end users SQL will often only be used as a simple method of retrieving records, however, Developers who master advanced statements can use it as a powerful and productive programming tool.

Contents highlights

Oracle 9i Database Objects including tables and materialized views

The Oracle 9i SQLPLUS interface

Creating Primary Indexes

Manipulating data in an Oracle 9i Database

Using Advanced functions such as Rank and First_Value

Joining Oracle tables using Ansi 99

Exercise highlights

Changing records in an Oracle 9i database

Outputting data using Oracle 9i functions

Using Ansi/99 joins between tables

Selecting records with where clauses

<https://www.seercomputing.com/files/index-essential-sql-9i-training.pdf>

<https://www.seercomputing.com/files/example-essential-sql-9i-training.pdf>

Oracle SQL for Users I

Duration:	1 Days	On-Site:	✓
No. of Exercises:	6	Public:	✗
No. of Sections:	9		
No. of Pages:	145		
Webpage:	https://www.seercomputing.com/sql-for-users-training-course-part1.php		

Synopsis for Oracle SQL for Users Part One training course

This course concentrates purely on data extraction and manipulation and is ideal for users who will not have permission to do anything other than create select statements.

Contents highlights

The SQLPlus Interface
Single Oracle Table queries
Oracle functions in the select statement
Where clauses to limit data

Exercise highlights

Navigation of SQL Plus
Manipulating data using Oracle functions
Selecting records using querying
Saving results of Oracle Queries into output files

<https://www.seercomputing.com/files/index-sql-part1-training.pdf>
<https://www.seercomputing.com/files/example-sql-part1-training.pdf>
<https://www.seercomputing.com/files/exercise-sql-part1-training.pdf>

Oracle SQL for Users II

Duration:	1 Days	On-Site:	✓
No. of Exercises:	4	Public:	✗
No. of Sections:	8		
No. of Pages:	216		
Webpage:	https://www.seercomputing.com/sql-for-users-training-course-part2.php		

Synopsis for Oracle SQL for Users Part Two training course

More SQL training concentrating on the Select statement, ideally suited to anyone who is a front end user and needs to develop their skills with selecting records from an Oracle database.

Contents highlights

Using Column and Break settings
Using the Case function to make decisions
Oracle REGEX usage
Creating Sub-queries to aid Data selection

Exercise highlights

Creating Sub-queries
Regular Expressions in Oracle SQL
Creating Professional Output in SQLPlus

<https://www.seercomputing.com/files/index-sql-part2-training.pdf>
<https://www.seercomputing.com/files/example-sql-part2-training.pdf>
<https://www.seercomputing.com/files/exercise-sql-part2-training.pdf>

Oracle SQL for Users III

Duration:	1 Days	On-Site:	✓
No. of Exercises:	4	Public:	✗
No. of Sections:	5		
No. of Pages:	192		
Webpage:	https://www.seercomputing.com/sql-for-users-training-course-part3.php		

Synopsis for Oracle SQL for Users Part Three training course

This course concentrates on using Oracle's advanced SQL functions to produce output suitable for Data Warehousing and Management Information.

Contents highlights

Using Tree Walk to process self joined tables

Creating Datasets to merge records

Using the Pivot function to process data

Flashback for rolling back data

Exercise highlights

Using Union to merge data

Pivoting Data to form a cross table output

Using Timestamps in Oracle

<https://www.seercomputing.com/files/index-sql-part3-training.pdf>
<https://www.seercomputing.com/files/example-sql-part3-training.pdf>
<https://www.seercomputing.com/files/exercise-sql-part3-training.pdf>

SQL Developer Training

Oracle's answer to Toad, SQL Developer gives the User the ability to use the Database with a GUI Interface.

The Courses in this section cover the basic usage of the product as well as the development of SQL queries and syntax for creating Database Objects.

Essentially the 'Using SQL with SQL Developer' course can be split into two component parts depending on the requirements of the Client

Seer Computing offer the complete course range for SQL training in the UK and Ireland.

Download our App of Oracle SQL Functions

<https://www.seercomputing.com/sql-app-details.php>

Using SQL with Oracle SQL Developer 18.2

Duration:	4 Days	On-Site:	✓
No. of Exercises:	18	Public:	✓
No. of Sections:	37		
No. of Pages:	884		
Webpage:	https://www.seercomputing.com/sql-developer182-training-course.php		

Synopsis for Oracle SQL with SQL Developer 18.2 training course

SQL is the foundation of all Oracle database actions. The SQL Developer 18.2 Interface offers a GUI front end for creating SQL statements and offers a valuable alternative to third party products such as Toad.

This course covers all aspects for end users and developers of SQL from simple SQL queries to creating entire Database sets of Tables, Indexes and Views.

See also the Part I and Part II versions of this course which split the four day course into two parts. Part I is aimed at 'power users' wishing to develop analytical SQL skills, Part II develops the ability to alter current Database Objects as well as create new Tables etc ...

Contents highlights

The SQL Developer Interface
 The Object Details Dialog
 Using Functions in SQL
 Joining Tables in an SQL Worksheet
 Exporting Data in SQL Developer
 Creating Materialized Views using SQL Developer
 Using SQL Developer to manipulate Oracle Tables

Exercise highlights

Selecting from Tables in SQL Developer
 Multiple Table Querying with Ansi SQL/92
 Creating Objects in SQL Developer
 Creating Reports in SQL Developer

<https://www.seercomputing.com/files/index-sql-developer182-training.pdf>
<https://www.seercomputing.com/files/example-sql-developer182-training.pdf>

Using SQL with Oracle SQL Developer 18.2 Part I

Duration:	2 Days	On-Site:	✓
No. of Exercises:	8	Public:	✗
No. of Sections:	19		
No. of Pages:	404		
Webpage:	https://www.seercomputing.com/sql-developer182-training-course-part1.php		

Synopsis for Oracle SQL with SQL Developer 18.2 Part I

SQL is the foundation of all Oracle and other brand database actions.

The very powerful SQL Developer Interface offers a GUI front end for creating SQL statements and offers a valuable alternative to third party products such as Toad.

This course covers all aspects using SQL Developer for extracting Data, essentially it is a two day version of our main 'Using SQL with SQL Developer 18.2' and takes the User through selecting and manipulating data.

Part II covers the insertion, updating and deletion of data as well as the creation of Database Objects.

Contents highlights

The SQL Developer 18.2 Interface
 The Object Details Dialog
 Using Functions in SQL
 Joining Tables in an SQL Worksheet
 Exporting Data in SQL Developer 18.2
 Totalling Data using SQL Developer 18.2

Exercise highlights

Selecting from Tables in SQL Developer
 Multiple Table Querying with Ansi SQL/92
 Using a Where Clause in SQL Developer
 Creating Snippets in SQL Developer

<https://www.seercomputing.com/files/index-sql-developer182-part1-training.pdf>
<https://www.seercomputing.com/files/example-sql-developer182-part1-training.pdf>

Using SQL with Oracle SQL Developer 18.2 Part II

Duration:	2 Days	On-Site:	✓
No. of Exercises:	10	Public:	✗
No. of Sections:	18		
No. of Pages:	480		
Webpage:	https://www.seercomputing.com/sql-developer182-training-course-part2.php		

Synopsis for Oracle SQL with SQL Developer 18.2 Part II

SQL is the foundation of all Oracle database actions. The SQL Developer Interface offers a GUI front end for creating SQL statements and offers a valuable alternative to third party products such as Toad.

This course covers aspects of using SQL Developer such as advanced query techniques, using the interface to amend and update information, creating Oracle Database objects etc ...

Please refer to either Part I of this course or the four day 'Using SQL with SQL Developer 18.2' if there is no previous knowledge of SQL.

This course is designed for Users of SQL who now need to create Objects etc using SQL Developer. The latest version of this product is 18.2, which we have a course for.

Contents highlights

Creating Reports in SQL Developer
Using SQL Developer to import Excel data into an Oracle Database
Creating Tables, Indexes and Constraints in SQL Developer
Creating Views and Materialized Views SQL Worksheet
Manipulating Table Constraints in SQL Developer

Exercise highlights

Loading Excel Data into SQL Developer
Creating User Defined Reports in SQL Developer
Tree Walking Oracle tables in SQL Developer
Creating Tables and other Objects in SQL Developer

Synopsis for Oracle SQL with SQL Developer 18.1 Part II

SQL is the foundation of all Oracle database actions. The SQL Developer Interface offers a GUI front end for creating SQL statements and offers a valuable alternative to third party products such as Toad.

This course covers aspects of using SQL Developer such as advanced query techniques, using the interface to amend and update information, creating Oracle Database objects etc ...

Please refer to either Part I of this course or the four day 'Using SQL with SQL Developer 18.1' if there is no previous knowledge of SQL.

This course is designed for Users of SQL who now need to create Objects etc using SQL Developer. The latest version of this product is 18.2, which we have a course for.

Contents highlights

Creating Reports in SQL Developer
 Using SQL Developer to import Excel data into an Oracle Database
 Creating Tables, Indexes and Constraints in SQL Developer
 Creating Views and Materialized Views SQL Worksheet
 Manipulating Table Constraints in SQL Developer

Exercise highlights

Loading Excel Data into SQL Developer
 Creating User Defined Reports in SQL Developer
 Tree Walking Oracle tables in SQL Developer
 Creating Tables and other Objects in SQL Developer

Using SQL with Oracle SQL Developer 4.2

Duration:	4 Days	On-Site:	✓
No. of Exercises:	18	Public:	✗
No. of Sections:	37		
No. of Pages:	884		
Webpage:	https://www.seercomputing.com/sql-developer42-training-course.php		

Synopsis for Oracle SQL with SQL Developer 4.2 training course

SQL is the foundation of all Oracle database actions. The SQL Developer 4.2 Interface offers a GUI front end for creating SQL statements and offers a valuable alternative to third party products such as Toad.

This course covers all aspects for end users and developers of SQL from simple SQL queries to creating entire Database sets of Tables, Indexes and Views.

See also the Part I and Part II versions of this course which split the four day course into two parts. Part I is aimed at 'power users' wishing to develop analytical SQL skills, Part II develops the ability to alter current Database Objects as well as create new Tables etc ...

Contents highlights

The SQL Developer Interface
The Object Details Dialog
Using Functions in SQL
Joining Tables in an SQL Worksheet
Exporting Data in SQL Developer
Creating Materialized Views using SQL Developer
Using SQL Developer to manipulate Oracle Tables

Exercise highlights

Selecting from Tables in SQL Developer
Multiple Table Querying with Ansi SQL/92
Creating Objects in SQL Developer
Creating Reports in SQL Developer

<https://www.seercomputing.com/files/index-sql-developer42-training.pdf>

Using SQL with Oracle SQL Developer 4.2 Part I

Duration:	2 Days	On-Site:	✓
No. of Exercises:	8	Public:	✗
No. of Sections:	19		
No. of Pages:	404		
Webpage:	https://www.seercomputing.com/sql-developer42-training-course-part1.php		

Synopsis for Oracle SQL with SQL Developer 4.2 Part I

SQL is the foundation of all Oracle and other brand database actions.

The very powerful SQL Developer Interface offers a GUI front end for creating SQL statements and offers a valuable alternative to third party products such as Toad.

This course covers all aspects using SQL Developer for extracting Data, essentially it is a two day version of our main 'Using SQL with SQL Developer 4.2' and takes the User through selecting and manipulating data.

Part II covers the insertion, updating and deletion of data as well as the creation of Database Objects.

Contents highlights

The SQL Developer 4.2 Interface
The Object Details Dialog
Using Functions in SQL
Joining Tables in an SQL Worksheet
Exporting Data in SQL Developer 4.2
Totalling Data using SQL Developer 4.2

Exercise highlights

Selecting from Tables in SQL Developer
Multiple Table Querying with Ansi SQL/92
Using a Where Clause in SQL Developer
Creating Snippets in SQL Developer

Oracle PLSQL Training

PLSQL is the procedural language for Oracle Databases. It is an essential language for Developers to learn if they wish to create Database Objects such as Procedures, Triggers and Functions

Seer Computing cover all versions of PLSQL from Oracle 9i up to the latest Oracle 18c.

The Essential PLSQL course covers the essential parts of PLSQL that Developer needs to know, in addition other courses cover the complete PLSQL course for each version of the Oracle Database from 9i onwards

Download our App of Oracle SQL Functions

<https://www.seercomputing.com/sql-app-details.php>

Oracle Essential PLSQL 18c

Duration:	3 Days	On-Site:	✓
No. of Exercises:	13	Public:	✓
No. of Sections:	25		
No. of Pages:	384		
Webpage:	https://www.seercomputing.com/essential-plsql-for-oracle-18c-training-course.php		

Synopsis for Essential Oracle 18c PL/SQL training course

PLSQL language is Oracle's versatile procedural extension to SQL, which capitalises on SQL's functionality and can increase database efficiency, effectiveness, scalability, portability and security.

The first part of the PL/SQL course concerns itself with the structure of the PLSQL language, then the training moves onto installing the code in Oracle's database structures; Triggers, Procedures and Functions, the latter two can be created in Oracle Packages which is also part of the training course. We have a PLSQL training course for whatever version of the Oracle Database you have. from Oracle 9i through to Oracle 18c.

Not only do we teach you the PLSQL language but also the things that make you a better than an average PLSQL programmer; error handling, nesting PLSQL code, indentation of code, and naming standards to name but a few.

Contents highlights (some of the many things you learn)

PLSQL programming structure
 Using Explicit and Implicit Cursors in PLSQL
 For, while and basic Loop Processing in PLSQL
 Programmer Defined Procedures and Functions
 Using UTL_FILE and Directories for I/O
 Exception Handling

Exercise highlights (some of the many things you get to practice)

Looping through records from the Database
 Creating variables in PLSQL
 Writing to the filesystem
 Using Execute Immediate
 DML Trigger creation

Oracle Essential PLSQL 11g

Duration:	3 Days	On-Site:	✓
No. of Exercises:	13	Public:	✗
No. of Sections:	24		
No. of Pages:	370		
Webpage:	https://www.seercomputing.com/essential-plsql-for-oracle-11g-training-course.php		

Synopsis for Essential Oracle 11g PLSQL training course

PLSQL language is Oracle's versatile procedural extension to SQL, which capitalises on SQL's functionality and can increase database efficiency, effectiveness, scalability, portability and security.

This course is run on the Oracle 11g database please make sure this is the version you require, we supply similar in Oracle 9i, 10g and 12c

Contents highlights

Defining PLSQL variables
 Performing select statements in PLSQL 11g
 Table processing in PLSQL 11g
 Storing PLSQL in the Database in Functions, Procedures and Packages
 Using UTL_FILE to communicate with the Database and File System
 Using Continue in Loops

Exercise highlights

Looping through records from the Database
 Creating variables in PLSQL
 Writing to the filesystem
 Using Execute Immediate
 DML Trigger creation

<https://www.seercomputing.com/files/index-essential-plsql-11g-training.pdf>

PLSQL 11g

Duration:	5 Days	On-Site:	✓
No. of Exercises:	19	Public:	✗
No. of Sections:	46		
No. of Pages:	847		
Webpage:	https://www.seercomputing.com/plsql-11g-training-course.php		

Synopsis for Oracle PLSQL 11g training course

PLSQL language is Oracle's versatile procedural extension to SQL, which capitalises on SQL's functionality and can increase database efficiency, effectiveness, scalability, portability and security.

Contents highlights

The Processing Block in PLSQL
Using Explicit Cursors in PLSQL
Loop Processing in PLSQL
Programmer Defined Procedures
Instead Of Triggers
Compound Triggers
Using UTL_FILE for I/O
PLSQL Data Structures and Collections

Exercise highlights

Inserting Records using a Loop
Selecting Records using Explicit Cursors
Writing Audit Trails to the Operating System
Using PLSQL to create Database Objects
Using Triggers to validate records

<https://www.seercomputing.com/files/index-plsql-11g-training.pdf>

Advanced PLSQL 11g

Duration:	3 Days	On-Site:	✓
No. of Exercises:	7	Public:	✗
No. of Sections:	39		
No. of Pages:	798		
Webpage:	https://www.seercomputing.com/plsql-11g-advanced-training-course.php		

Synopsis for Advanced Oracle PLSQL 11g training course

A three day course developed particularly for Developers/Analysts who have experience in the fundamentals of PLSQL but require additional knowledge particularly in the area of new developments since Oracle 9i, 10g and 11g, please refer to the index below for this course for full details.

PLSQL language is Oracle's versatile procedural extension to SQL, which capitalises on SQL's functionality and can increase database efficiency, effectiveness, scalability, portability and security.

Contents highlights

Loop Continue and Continue When clauses
 Using Case statements in PLSQL
 Advanced Error handling
 Using Instead of triggers with Views
 Wrapping PLSQL Functions and Procedures
 Techniques for centralising PLSQL code
 Overloading PLSQL modules

Exercise highlights

Using PLSQL Tables
 Using DBMS_METADATA within PLSQL
 Writing Audit Trails to the Operating System
 Using Compound triggers in the Database
 Trapping Errors between Modules

<https://www.seercomputing.com/files/index-advancedplsql-11g-training.pdf>

Oracle Essential PLSQL 10g

Duration:	3 Days	On-Site:	✓
No. of Exercises:	13	Public:	✗
No. of Sections:	23		
No. of Pages:	351		
Webpage:	https://www.seercomputing.com/essential-plsql-for-oracle-10g-training-course.php		

Synopsis for Oracle 10g Essential PLSQL training course

PLSQL language is Oracle's versatile procedural extension to SQL, which capitalises on SQL's functionality and can increase database efficiency, effectiveness, scalability, portability and security.

This course is run on the Oracle 10g database, Seer Computing offers different versions of this course.

Contents highlights

Error handling with Exception catches
Using open, fetch and close in PLSQL 10g
PLSQL 10g Loop processing
Reading files from the operating system
Packaging procedures in PLSQL 10g
Case statements and expressions in PLSQL 10g

Exercise highlights

Testing variables in PLSQL
Dynamic SQL in PLSQL 10g
Using triggers to validate data
Communicating with the User
DML Trigger creation

<https://www.seercomputing.com/files/index-essential-plsql-10g-training.pdf>

Oracle Essential PLSQL 9i

Duration:	3 Days	On-Site:	✓
No. of Exercises:	13	Public:	✗
No. of Sections:	23		
No. of Pages:	344		
Webpage:	https://www.seercomputing.com/essential-plsql-for-oracle-9i-training-course.php		

Synopsis for Oracle Essential PLSQL 9i training course

PLSQL language is Oracle's versatile procedural extension to SQL, which capitalises on SQL's functionality and can increase database efficiency, effectiveness, scalability, portability and security.

This course is run on the Oracle 9i database, please check that this is the version of the Database you wish to be trained in

Contents highlights

The declare, begin and end structure
Selecting records from the Database with cursors
For, while and basic Loop Processing in PLSQL 9i
Creating Developer defined PLSQL 9i Objects
Using UTL_FILE to write to the file system
Exception Handling

Exercise highlights

Creating Database triggers in Oracle 9i
Using rowtype in PLSQL 9i
Using exceptions to write Audit logs
DML and DDL in PLSQL 9i
DML Trigger creation

PLSQL II

Duration:	2 Days	On-Site:	✓
No. of Exercises:	5	Public:	✗
No. of Sections:	20		
No. of Pages:	293		
Webpage:	https://www.seercomputing.com/plsql-training-course-part2.php		

Synopsis for Oracle PLSQL II training course

This is the second part of the PLSQL courses and deals with very advanced techniques. Emphasis is also given to enhancements to PLSQL introduced in later versions of the Oracle Database.

This course is only suitable to Developers who have already attended the Essential PLSQL course or are experienced Developers wishing to update their skills.

Contents highlights

Advanced Techniques

'Instead Of' triggers

PLSQL Enhancements in 8i

PLSQL Enhancements in 9i

PLSQL Tables

Exercise highlights

Database triggers

Overloading

Case statements in PLSQL

PLSQL tables

Discoverer Training

Discoverer, the ability to enable an Oracle Database's users to 'self service' their reporting requirements, freeing the Organisation from the long drawn out cycle of Request, Specification, Build and User Acceptance.

Discoverer has two essential parts, the User Front End and the Administrator End User Layer, Seer Computing Ltd offer training in both of these elements and in addition offer consultancy in maximizing the benefits of using an existing system.

We can also give advice on User roll-out, tuning and performance and can even build your End User Layer if you haven't the resource to spare. Discoverer has had several different versions over the years, we provide training from 3.1 to 11g. Consultancy services we provide.

Download our App of Oracle SQL Functions

<https://www.seercomputing.com/sql-app-details.php>

Discoverer Administrator 11g

Duration:	3 Days	On-Site:	✓
No. of Exercises:	17	Public:	✗
No. of Sections:	21		
No. of Pages:	536		
Webpage:	https://www.seercomputing.com/discoverer-11g-administration-training-course.php		

Synopsis for Oracle Discoverer 11g Administrator Training Course

Oracle Discoverer 11g Administrator governs the environment that Discoverer Users exist in. If you are using Discoverer at least one or more people in your Organisation needs to know how to use Discoverer Administration, the skills needed for the role range from good communication, reasonable SQL skills, to understanding how your Oracle Database table structure works. Discoverer Administration is used to perform mandatory tasks such as creating and granting access to Business Areas (Business Areas are vital as the link between User and the Database). Administrator is also used to perform tasks such as maintaining the End User Layer and setting default item names and table characteristics as well as controlling security access, all this and more is explained and practised in the course.

Seer Computing recommend that anyone attending the Discoverer Administrator course should attend the Discoverer Desktop or Plus training course first, this Administration course assumes knowledge of what the front end products can achieve with the right administration. Why not combine the two courses in a weeks training course.

Contents highlights (Some of the things you can look forward to)

Administrator Business Areas and Simple Folders
 Complex and Custom Folders in Discoverer Administrator
 Tuning the Discoverer End User Layer with Summaries and Materialized Views
 Setting Security and Privilege in Discoverer Administrator
 Routine Tasks for maintaining the End User Layer in Discoverer Administrator

Exercise highlights (We teach you then you can try it out)

Creation of a Discoverer End User Layer
 Simple Business Areas and Folders Creation
 Setting up Users and their security in Oracle Discoverer
 Creating hierarchies, joins and conditions for drilling

Discoverer Desktop 11g

Duration:	2 Days	On-Site:	✓
No. of Exercises:	12	Public:	✗
No. of Sections:	20		
No. of Pages:	366		
Webpage:	https://www.seercomputing.com/discoverer-11g-desktop-training-course.php		

Synopsis for Oracle Discoverer 11g Desktop Training Course

Oracle Discoverer 11g Desktop is a deceptively simple, easy to use business intelligence tool that gives end users with no SQL knowledge the ability to create ad hoc database queries, analyse information, produce reports and publish information on the web.

We say deceptively simple because Discoverer Desktop has hidden depth; it allows data modelling, manipulation and analysis without much input from IT professionals, think of it as being like Microsoft Excel without the need to enter the data, the data is live and dynamic giving the User up to date information.

Discoverer Desktop is a client based version of the product, Plus sits in a web browser, they are very similar products and you would need to attend one or the other, but not both ...

Contents highlights (Learn this and more ...)

Formatting Discoverer Worksheets
 Creating Calculated Items in Discoverer
 Limiting Records in Discoverer using Conditions
 Making Discoverer Worksheets generic using Parameters
 Aggregating Data in Discoverer using Drilling and Hierarchies

Exercise highlights (Get your hands dirty practising this ...)

Creating rudimentary Discoverer worksheets
 Sorting Discoverer Worksheets
 Totals and sub-totalling in Discoverer
 Highlighting exceptions in Discoverer
 Aggregating and Drilling through data hierachies in Discoverer
 Scheduling Workbooks in Discoverer

Discoverer Plus 11g

Duration:	2 Days	On-Site:	✓
No. of Exercises:	12	Public:	✗
No. of Sections:	20		
No. of Pages:	435		
Webpage:	https://www.seercomputing.com/discoverer-11g-plus-training-course.php		

Synopsis for Oracle Discoverer 11g Plus Training Course

Discoverer Plus runs via a browser, this means that the product does not have to be rolled out to Users, they just need to be given their logon details and of course the URL.

Discoverer Plus is a front end link to the Oracle Database, set up by the Administrator, it gives the User a safe and controlled way to help themselves to the data in the Database.

This is a two day course and examines all the intricacies of the product, bear in mind that Discoverer Plus has a sister product in Discoverer Desktop, Desktop is installed on each User's machine and removes the need to configure an Application Server.

Oracle Discoverer Plus (or Desktop) cannot work without the Administrator providing the links with the Database (and yes we have an excellent Administration course).

Contents highlights (Learn about the following and much more ...)

The Discoverer 11g Plus Interface
 Creating Conditional Formats and Stoplights in Discoverer 11g Plus
 Creating Cross-Tab Worksheets in Discoverer 11g Plus
 Creating Calculated Items in Discoverer 11g Plus
 Limiting Records in Discoverer 11g Plus using Conditions
 Making Discoverer Worksheets generic using Parameters
 Aggregating Data in Discoverer 11g Plus using Drilling and Hierarchies

Exercise highlights (Practice what we preach !!!)

Creating rudimentary Discoverer 11g Plus worksheets
 Totals and sub-totalling in Discoverer 11g Plus
 Formatting Data in Discoverer 11g Plus
 Totalling and Sorting Worksheets in Discoverer 11g Plus
 Exporting Data from Discoverer 11g Plus

Application Express Training

Oracle Application Express (APEX) is Oracle's primary tool for developing Web applications with SQL and PL/SQL.

Run using a web browser, you can develop and deploy professional Web-based applications for desktops and mobile devices. Application Express runs within the Oracle Database without installing on a client.

Download our App of Oracle SQL Functions

<https://www.seercomputing.com/sql-app-details.php>

Apex PLSQL

Duration:	4 Days	On-Site:	✓
No. of Exercises:	14	Public:	✗
No. of Sections:	26		
No. of Pages:	496		
Webpage:	https://www.seercomputing.com/essential-plsql-for-oracle-11g-apex4.2-training-course.php		

Synopsis for Essential Oracle 11g PLSQL training course with APEX 4.2

PLSQL is an essential language for Developers to master in order to work with an Oracle database. Extending the SQL language it gives Developers the ability to validate and process records quickly and efficiently.

This course is run on the Oracle 11g database using Application Express 4.2, please make sure this is the version you require, we supply similar in Oracle 9i, 10g and 12c

Contents highlights

Defining numeric variables in PLSQL
 Performing DML statements in PLSQL 11g
 Loop processing in Oracle PLSQL 11g
 Storing PLSQL in the Database in Functions, Procedures and Packages using APEX 4.2
 Using UTL_FILE to communicate with the Database and File System
 Catching Exceptions in Oracle 11g

Exercise highlights

Looping through records from the Database
 Creating variables in PLSQL
 Writing to the filesystem
 Using Execute Immediate for DDL
 DML Trigger creation

Apex SQL

Duration:	4 Days	On-Site:	✓
No. of Exercises:	14	Public:	✗
No. of Sections:	18		
No. of Pages:	653		
Webpage:	https://www.seercomputing.com/essential-sql-for-oracle-11g-apex4.2-training-course.php		

Synopsis for Oracle 11g Essential SQL training course using APEX 4.2

SQL is the foundation of all Oracle database commands. Coupled with Application Express its power in the Database is unlimited.

This course assumes Delegates have little or no experience of Oracle SQL or Application Express. For Users of Application Express it is ideal to learn how to interrogate the Database, for Developers its the first step to learning the whole of the facilities of APEX

Contents highlights

Uploading and Downloading Data

Limitations of Query Builder

Using SQL Command

Creating Lookup Tables

Full Outer Joins

Using Object Browser

Creating SQL Scripts in Application Express

Exercise highlights

Running SQL Scripts in Application Express

Using Ansi/99 joins between tables

Updating records in APEX

Linking tables with foreign keys

Oracle Forms Training

Forms is a front end GUI product provided by Oracle to allow Users to access the Oracle Database whilst providing the Developer with a means of controlling this access.

Some of our Developers remember Forms when it was Forms 2.3, it has moved on since then and became Forms 3, Forms 4, Forms 4.5, Forms 5, Forms 6, Forms 9i, Forms 10g and the latest Forms 11i.

Seer Computing Ltd has been supporting and building Forms applications since Forms 3 and currently have the following versions of training courses ...

Forms 11g
Forms 10g
Forms 9i
Forms 6i

Download our App of Oracle SQL Functions

<https://www.seercomputing.com/sql-app-details.php>

Oracle Forms 11g

Duration:	5 Days	On-Site:	✓
No. of Exercises:	13	Public:	✗
No. of Sections:	49		
No. of Pages:	690		
Webpage:	https://www.seercomputing.com/oracle-forms-11g-training-course.php		

Synopsis for Oracle Forms 11g training course

Oracle Forms 11g is the web incarnation of the highly successful and robust series of front end products which we came across when it was Forms 2.3 and ran on an Oracle 6 Database ! that makes us feel old ... but wise !

Oracle Forms has in the past few years been superseded by other more modern interfaces but if you have a legacy system that needs attention we are the Company to come and teach your staff how to use this flexible front end.

This version is solely web based but still retains the functionality of its predecessors.

Contents highlights (Five days with loads of information)

The 11g Wizards
Layouts
Form Objects
Master-Detail Relations
PL/SQL in Forms 10g
Triggers
Record Groups
GUI Items

Exercise highlights (Lots to do, you're building a system)

Running Forms in a browser
Creating Tabular and Form modules
Creating simple validation
Creation of multiple blocks in a Form
Creating Hierarchical Tree Items

Java Training

Java is the critical coding skill for any Developer wishing to grow their commercial potential and keep a competitive edge in today's market. Fast becoming the standard programming language used across all kinds of enterprise, it is a vast and rich system. That's why having more than a cursory knowledge of the concepts of Java programming is essential for the serious IT professional.

Hands-on experience is vital with such a functionally rich product, that's why at a Seer training course, delegates spend over 50% of their specialist IT training course using Java in practical and stimulating exercises supported by our experienced trainers. Each topic is introduced and developed with working code, written by our own consultants.

Our best in class IT training courses are geared towards those who are new to the world of Java programming, for those with entry-level knowledge, and for those with a reasonable knowledge of the concepts of Java programming.

All our courses can be run as onsite training or as public training courses. Our popular onsite training means we bring everything to you. We take charge of the quick setup, delivering hands-on courses with all the relevant training materials at your chosen place of work.

Java 1.9 Programming with Eclipse Oxygen

Duration:	5 Days	On-Site:	✓
No. of Exercises:	23	Public:	✓
No. of Sections:	44		
No. of Pages:	772		
Webpage:	https://www.seercomputing.com/java9-eclipse-oxygen-training-course.php		

Synopsis for Java 9 Eclipse Oxygen Programming training course

This is the ideal course for anyone wishing to learn to program in Java 9 using Eclipse Oxygen Java 9 was released in September 2017 and as well as efficiency improvements, a few bits and pieces have occurred to the programming techniques.

A major change is the deprecation of using a Constructor to create wrapper classes ... Integer value = new Integer('12');, there are lots of alternatives and we include them in the course.

The course which is five day duration takes the delegate through basic Java 9 programming techniques, looping, writing to files etc and finally interfacing with two of the worlds most popular Databases, MySQL and Oracle

The course comes with a comprehensive manual, with the solutions for every exercise.

Referred to as Java 1.9 or Java 9.

Contents highlights (Some of the things you'll learn)

Branching in loops in Java including For Each looping

Using Multi-dimensional arrays

Accessing values in HashMaps

Leniency in Calendars

Accessing records in Oracle and MySQL databases

Primitive and Wrapper Datatypes

Exercise highlights (Some of the many things you'll practice)

Selecting from Oracle and MySQL databases

Dates and Calendars in Java 9

Writing CSV files

Using parameters in Eclipse Oxygen and Java 9

Practical use of OOps architecture

Java 1.9 Swing with Eclipse Oxygen

Duration:	5 Days	On-Site:	✓
No. of Exercises:	21	Public:	✗
No. of Sections:	41		
No. of Pages:	909		
Webpage:	https://www.seercomputing.com/java9-swing-eclipse-oxygen-training-course.php		

Synopsis for Java 9 Swing with Eclipse Oxygen training course

The optional follow up course from our Java 9 Programming with Eclipse Oxygen course, in our public courses, this training course is scheduled the week after the Java 9 Programming course, but we can present this course on-site at your venue too.

The Java 9 Swing course assumes that the delegate has been on the first course or is a Java Programmer and therefore dives straight in to creating GUI modules in Java

The Swing course is designed for delegates wishing to use Java AWT and Swing classes in a commercial setting, it builds up the knowledge of the delegate to the point where they are creating functionally rich input screens with complicated data integrity checks, pop up menus and toolbars.

All Swing classes are covered from the basic JFrames through to JTables and everything in between. JApplet classes have been deprecated in Java 9 but we've left the section in the course ... are we being lazy ? no !! we've left it in because you may have to support this technology for a while so you need to know how it works and deprecation doesn't mean removed, it just means no longer updated and may be removed in a future release.

Contents highlights (See the index below for the complete contents)

Using Input dialogs with icons and lists
 Fonts with createtitledBorder
 Using Box as a container
 Wrapping text in JTextArea
 Outputting values in specified masks using MaskFormatter
 Changelistener with JTabbedPane

Exercise highlights (Loads of exercises and time to do them in)

Creating a JMenu
 Using JTables as spreadsheets
 Using Borders in Java 9
 Applets and Applications
 Exception handling with JSwing

<https://www.seercomputing.com/files/index-java9-swing-eclipse-oxygen-training.pdf>

Java 1.9 Programming

Duration:	5 Days	On-Site:	✓
No. of Exercises:	24	Public:	✗
No. of Sections:	43		
No. of Pages:	686		
Webpage:	https://www.seercomputing.com/java9-programming-training-course.php		

Synopsis for Java 9 Programming training course

Fundamentally this is the same course as the Java 9 Programming using Eclipse Oxygen, the major difference is the course does not use Eclipse Oxygen as the developer tool, instead it uses the DOS command line.

Why have use this course ? well basically if you use other front end tools to develop Java why bother learning Eclipse ... this course concentrates on the Java programming language without the need to understand what Eclipse is doing to the code.

This course is offered as an on-site at your venue course or you can come to us at our offices in Swansea or (a third option) we can at extra cost arrange a training facility near your location.

This Java 9 training course is designed for delegates wishing to develop a Java knowledge, from very basic concepts using it in a Commercial environment.

Following this course, it is suggested that delegates later attend the Java Swing 1.9 training course.

Contents highlights (just a flavour of what is discussed in the five days)

Using concatenation with numbers
Casting and converting values
Using break in Java switches
Returning arrays in Java
Using String methods for REGEX
Using Confirm dialogs
Populating an arraylist with addall

Exercise highlights (Each exercise is designed to improve your understanding of Java 9)

Using Dos to generate Java classes
Manipulating datatypes
Handling Gregorian Dates and Calendars
Raising and catching Exceptions

Java 1.9 Swing

Duration:	5 Days	On-Site:	✓
No. of Exercises:	21	Public:	✗
No. of Sections:	37		
No. of Pages:	809		
Webpage:	https://www.seercomputing.com/java9-swing-training-course.php		

Synopsis for Java 1.9 (Java 9) Swing training course

This is an additional course following on from the Java 9 Programming course, again this course does not use the Eclipse software for development, pull down the menu if you do need Java 9 with Eclipse Oxygen, Neon, Mars etc. This course dives straight in to creating GUI modules in Java, it assumes you know the fundamentals of Java programming, if you don't, no worries, get yourself on the Java 9 programming course ... we do that too !

All Java 9 Swing classes are covered from the basic JFrames through to JTables and JApplets and everything in between.

Contents highlights (a sample of the topics that help make this course go with a 'swing')

Using Message Dialogs
All the Layouts in Java 9
Resizing JButtons with Insets
Hearing Event Listeners
Using MaskFormatter with numbers
DefaultListModel with JList
Converting a basic Application to an Applet

Exercise highlights (your chance to show you've been paying attention !)

Running processes via JMenu
Creating a JToolBar
Using Layouts to create User input screens
Using a SpinnerModel
Customising with Look and Feel

<https://www.seercomputing.com/files/index-java9-swing-training.pdf>

Java 1.8 Programming with Eclipse Oxygen

Duration:	5 Days	On-Site:	✓
No. of Exercises:	23	Public:	✗
No. of Sections:	44		
No. of Pages:	772		
Webpage:	https://www.seercomputing.com/java8-eclipse-oxygen-training-course.php		

Synopsis for Java 8 Eclipse Oxygen Programming training course

This course is suitable for anyone who has no or some experience of Java programs, our Consultant will pace the course according to your needs

The course which is five day duration takes the delegate through basic Java 8 programming techniques, oops architecture and finally interfacing with two of the worlds most popular Databases, MySQL and Oracle

This course features Java 8 and Eclipse Oxygen, if you need a different version of either pull down our menu, our courses span over 10 years of Java and go back four versions of Eclipse.

The courses are conducted using Eclipse Mars as the editor for the programming and the software and its usage is covered throughout the course.

Contents highlights (so many topics to choose from, here are a few ...)

Selecting from MySQL
 Looping Multi-dimensional arrays
 Writing files from Java processes
 Dates and Calendars
 Updating records in Oracle
 Compatibility between Primitive and Wrapper Datatypes

Exercise highlights (a quick run round the block then get down to doing these ...)

Logging onto Oracle and MySQL databases
 Using Strings and Characters in Java
 Conditional testing
 Using parameters in Eclipse Oxygen and Java 8
 Setting up Developer Interfaces and Classes

<https://www.seercomputing.com/files/index-java8-eclipse-oxygen-training.pdf>

Java 1.8 Swing with Eclipse Oxygen

Duration:	5 Days	On-Site:	✓
No. of Exercises:	21	Public:	✗
No. of Sections:	41		
No. of Pages:	909		
Webpage:	https://www.seercomputing.com/java8-swing-eclipse-oxygen-training-course.php		

Synopsis for Java 1.8 Swing with Eclipse Oxygen training course

This training course concentrates on the GUI side of Java 8, Java Swing

You'll need to have either attended our Java programming course first or be an experienced Java programmer before attempting this training course.

All Swing classes are covered from the basic JFrames through to JTables and JApplets and everything in between.

The course comes with a comprehensive manual, and over 80 working modules in addition to the solutions for every exercise.

This is a practical course based on commercial requirements and can be held on-site at your venue and on a start date of your choosing.

Contents highlights (See the Index below to view all of the contents)

Using Input dialogs with icons and lists

Fonts with createtitledBorder

Using Box as a container

Wrapping text in JTextArea

Using the output tag in HTML

ChangeListener with JTabbedPane

Exercise highlights (Lots of exercises covering the entire course)

Creating a JMenu

Using JTables as spreadsheets

Using Borders in Java 8

Applets and Applications

Exception handling with JSwing

Java 1.8 Swing

Duration:	5 Days	On-Site:	✓
No. of Exercises:	21	Public:	✗
No. of Sections:	37		
No. of Pages:	809		
Webpage:	https://www.seercomputing.com/java8-swing-training-course.php		

Synopsis for Java 1.8 (Java 8) Swing training course

This is an additional course following on from the Java 8 Programming course, again this course does not use the Eclipse software for development, pull down the menu if you do need Java 8 with Eclipse Oxygen, Neon, Mars etc

This course dives straight in to creating GUI modules in Java, it assumes you know the fundamentals of Java programming, if you don't, no worries, get yourself on the Java 8 programming course ... we do that too !

All Java 9 Swing classes are covered from the basic JFrames through to JTables and JApplets and everything in between.

JApplet you say ? isnt that deprecated in Java 9 ? yes it is but deprecated does not mean drop anything that currently uses it and redesign a system, so we've left it in so that you can understand how it works if you have to maintain it or replace it.

Contents highlights (a sample of the topics that help make this course go with a 'swing')

Using Message Dialogs
Using Color with JFrame
All the Layouts in Java 8
Resizing JButtons with Insets
Hearing Event Listeners
Using MaskFormatter with numbers
DefaultListModel with JList
Converting a basic Application to an Applet

Exercise highlights (your chance to show you've been paying attention !)

Running processes via JMenu
Creating a JToolBar
Using Layouts to create User input screens
Using a SpinnerModel
Customising with Look and Feel

Java 1.7 Programming with Eclipse

Duration:	5 Days	On-Site:	✓
No. of Exercises:	23	Public:	✗
No. of Sections:	44		
No. of Pages:	775		
Webpage:	https://www.seercomputing.com/java-eclipse-training-course.php		

Synopsis for Java 1.7 Programming with Eclipse training

This is the ideal course for anyone wishing to learn to program in Java using the Eclipse software

The course which is five day duration takes the delegate through basic Java programming techniques, oops architecture and finally interfacing with two of the worlds most popular Databases, MySQL and Oracle

The courses are conducted using Eclipse as the editor for the programming and the software and its usage is covered throughout the course.

The course comes with a comprehensive manual, with the solutions for every exercise.

This is a practical course based on commercial requirements.

Contents highlights

Looping Arrays in Java
Reading and Writing to files (IO)
Oops concepts and practical usage in Java
Using Oracle datatbases in Java
REGEX in Java
Using Arraylists
Creating and Using Enums in Java

Exercise highlights

Selecting records in a MySQL Database
Using Calendars
Creating comma separated files
Creating and passing variables
Using Java Constructors

Java 1.7 Programming

Duration:	5 Days	On-Site:	✓
No. of Exercises:	24	Public:	✗
No. of Sections:	42		
No. of Pages:	663		
Webpage:	https://www.seercomputing.com/java-programming-training-course.php		

Synopsis for Java 1.7 Programming training course

Most IT departments need people who have some Programming background, Java is the ideal programming language to learn programming techniques not only does it incorporate standard methods such as variable control and looping but also resembles other programming languages such as C, C++ and even Oracle PLSQL

This course is designed for delegates wishing to develop a Java knowledge, from very basic concepts right up to producing batch applications which can be used in a Commercial environment. This Java Programming training course is an extended version of Module One of the Fundamentals of Java course which is held as both on-site and public courses.

This version is currently only offered as an on-site training course and is designed for Companies who wish to introduce new members of staff to Java or to re-train existing staff in the new programming styles of OOPS (Object Orientated Programming).

Contents highlights

Java Datatypes
Arrays and Looping
Concepts of OOPS
Exception Handling
Dates in Java
Using Javadoc

Exercise highlights

Basic output onto the command line
Converting and Casting Datatypes
Handling Gregorian Dates

Java 1.7 Swing

Duration:	5 Days	On-Site:	✓
No. of Exercises:	21	Public:	✗
No. of Sections:	37		
No. of Pages:	809		
Webpage:	https://www.seercomputing.com/java7-swing-training-course.php		

Synopsis for Java 7 Swing training course (Java 1.7)

The follow on course from our Java 1.7 Programming course, this course dives straight in to creating GUI modules in Java

This course is designed for delegates wishing to use Java AWT and Swing classes in a commercial setting, it builds up the knowledge of the delegate to the point where they are creating functionally rich input screens with complicated data integrity checks, pop up menus and Java toolbars.

All Swing classes are covered from the basic JFrames through to JTables and JApplets and everything in between.

Note: A good working knowledge of Java programming is a must for this course, so therefore delegates should have attended our Java 1.7 Programming training course or have had comprehensive period of time working with Java.

Contents highlights

Event Listeners including ActionListener, MouseListener etc
 Creating Java for the Web and Applications
 Layouts including the new GroupLayout
 JTextFields, JFormattedTextFields, JTextAreas and all Input Components
 JMenus, JToolbars, JPopupMenu and JTaskBar
 Incorporating LAFs into Java

Exercise highlights

Creating a JTaskBar
 Using JTrees and JTables
 Using GroupLayout, BorderLayout and GridLayout
 Web enabling Applications
 Error checking with JSwing

PHP / MySQL / MariaDB Training

PHP is the one of the best programming languages for creating high quality websites, whether it's just making decisions which HTML to echo or reading the data for the site from XML files or MySQL Database.

What a product MySQL is, take it from Oracle Developers, we are still amazed that its free to download and use, but being a Database it's not an easy product to use unless you have the right training, that's where we come in, using the techniques we used for over a decade teaching Oracle and its relative products, our MySQL courses are designed to give Delegates practical exercises and real insight into this powerful relational Database.

To all intents and purposes, MariaDB is the same as MySQL, we'll train you in this version if that is your requirement

PHP courses can be taken on their own or combined with either MySQL or MariaDB, both MySQL and MariaDB can be separate courses.

PHP 7.1 and MySQL 5.7

Duration:	5 Days	On-Site:	✓
No. of Exercises:	23	Public:	✓
No. of Sections:	38		
No. of Pages:	858		
Webpage:	https://www.seercomputing.com/php7-and-mysql5-training-course.php		

Synopsis for PHP 7.1 and MySQL 5.7 Programming training course

This course is offered as a public course or we can come to your venue, it provides three days learning PHP, the next two days uses PHP to work with a MySQL database (if you prefer MariaDB we can do this instead)

The purpose of this course is to help you build flexible websites using dynamic PHP 7.1 additionally accessing a MySQL 5.7 database, the course covers good programming practices and techniques, armed with these skills you can produce the output whatever your design.

PHP and MySQL training courses are available separately, please select the details from the menu at the top of the page.

Content highlights (Just a taster ...)

PHP Arrays
 Conditional PHP Statements
 Regular Expressions (REGEX)
 Exception Handling
 Using Switch in PHP
 MySQL Datatypes
 Prepared Statements in MySQL
 Importing and Exporting in MySQL

Exercise highlights (Lots to learn and practice ...)

Creating HTML output using PHP
 Creating Cookies
 Loading data into MySQL
 Selecting and displaying records from a MySQL database
 Passing data between pages using _POST

Essential MySQL 5.7

Duration:	4 Days	On-Site:	✓
No. of Exercises:	16	Public:	✓
No. of Sections:	24		
No. of Pages:	533		
Webpage:	https://www.seercomputing.com/essential-mysql57-training-course.php		

Synopsis for the Essential MySQL 5.7 training course

MySQL has all the power of a large Database but with little or no setup or running problems
This course uses MySQL via the command line prompt, if you need MySQL based on a PHP interface, we have that course available, please select from the menu at the top of the page.
This MySQL course is four day duration and breaks down the usage of MySQL for storage and retrieval of data, this is principally for Users needing to extract and maintain the Database

Contents highlights (So much to tell you about ...)

Database Objects including Tables, Views and Triggers
Creating Indexes for Tables
Manipulating data in a MySQL Database
Introduction to Regular Expressions
Querying from Multiple Database Tables
Creating Procedures, Functions and Triggers

Exercise highlights (4 days to try out what you've learned)

Controlling DML with Table Triggers
Using Ansi99 joins between tables
Restricting records with where clauses and limit
Creating Database Tables, Views, Indexes and Foreign Keys
MySQL functions to manipulate output

<https://www.seercomputing.com/files/index-essential-mysql57-training.pdf>
<https://www.seercomputing.com/files/example-essential-mysql57-training.pdf>
<https://www.seercomputing.com/files/exercise-essential-mysql57-training.pdf>

MySQL 5.7

Duration:	2 Days	On-Site:	✓
No. of Exercises:	10	Public:	✗
No. of Sections:	13		
No. of Pages:	335		
Webpage:	https://www.seercomputing.com/mysql5-training-course.php		

Synopsis for MySQL 5.7 Programming training course

This is the course to take if you need to build flexible websites accessing a MySQL 5.7 database via PHP

The course does not only help to design interesting and great looking sites, it is concerned with the processing in the background that will help produce the output whatever your design.

The course uses the mysqli functions and assumes a good knowledge of PHP.

Contents highlights

Regular Expressions (REGEX)

MySQL Datatypes

MySQL where clauses

Prepared Statements in MySQL

Importing and Exporting in MySQL

Exercise highlights

Loading data into MySQL

Selecting and displaying records from a MySQL database

Looping through tables

<https://www.seercomputing.com/files/index-mysql-training.pdf>

<https://www.seercomputing.com/files/example-mysql-training.pdf>

<https://www.seercomputing.com/files/exercise-mysql-training.pdf>

PHP 7.1

Duration:	3 Days	On-Site:	✓
No. of Exercises:	13	Public:	✗
No. of Sections:	22		
No. of Pages:	521		
Webpage:	https://www.seercomputing.com/php7-training-course.php		

Synopsis for PHP 7.1 Programming training course

A three day course which deals with using PHP to produce dynamic and flexible webpages, this is the PHP part of the combined PHP/MySQL course with the Database element removed.

The combined course is available as a public or on-site course, this 3 day course is on-site only (or our offices in Swansea)

In order to perform on-site training, all we need is a room with enough 'elbow' room for the delegates, we don't need access to your network and we can fit around a start date of your choosing.

Content highlights (Its all good, but here are a few topics)

PHP Arrays
Conditional PHP Statements
Regular Expressions (REGEX)
Exception Handling
Using Switch in PHP

Exercise highlights (Lots of practical work, here are a few)

Creating HTML output using PHP
Creating Cookies
Passing data between pages using `_POST`

<https://www.seercomputing.com/files/index-php7-training.pdf>
<https://www.seercomputing.com/files/example-php7-training.pdf>
<https://www.seercomputing.com/files/exercise-php7-training.pdf>

PHP 7.1 and MariaDB 10

Duration:	5 Days	On-Site:	✓
No. of Exercises:	23	Public:	✗
No. of Sections:	38		
No. of Pages:	858		
Webpage:	https://www.seercomputing.com/php7-and-mariadb10-training-course.php		

Synopsis for PHP 7.1 and MariaDB 10 Programming training course

This is the course to take if you need to build flexible websites using dynamic PHP 7.1 additionally accessing a MariaDB 10 database.

The course does not only help to design interesting and great looking sites, it is concerned with the processing in the background that will help produce the output whatever your design.

Starting with basic PHP, the course develops right up to Regular Expressions, in MariaDB the course uses the mysqli functions introduced for use with PHP.

Contents highlights

PHP Arrays
 Conditional PHP Statements
 Regular Expressions (REGEX)
 Exception Handling
 Using Switch in PHP
 MariaDB Datatypes
 Prepared Statements in MariaDB
 Importing and Exporting in MariaDB

Exercise highlights

Creating HTML output using PHP
 Creating Cookies
 Loading data into MariaDB
 Selecting and displaying records from a MariaDB database
 Passing data between pages using _POST

Webpage:	https://www.seercomputing.com/mariadb10-training-course.php		

Synopsis for Using MySQL 5.5 with PHP Training Course

This is the course to take if you need to further your PHP knowledge by learning how to access a MySQL database within it.

The course expects the delegate to be already conversant with PHP techniques and teaches the Delegate how to use this knowledge to communicate with the MySQL database.

Contents highlights

Selecting records in MySQL
Use of where clauses in MySQL
Selecting from more than one table
Regular Expressions (REGEX) in MySQL
Exception Handling
MySQL Datatypes
Prepared Statements in MySQL
Importing and Exporting in MySQL

Exercise highlights

Selecting and limiting records in MySQL
Joining Tables in MySQL
Creating indexes in MySQL
Exporting and importing using a MySQL database

JavaScript / CSS3 / SQLite Training

Continuing on from our PHP and MySQL courses, professional Developer will need JavaScript and CSS3 training to create the highest quality websites

JavaScript unlike PHP can be used to react to clicks and options entered into web forms by the User

CSS3 is necessary to produce the webpage efficiently with structure, colour and advanced rendering techniques

SQLite is the internal Database used by both Android and iOS Apps, this enables App Developers to share and store large amounts of data within an App using SQL statements

Essential CSS 3

Duration:	4 Days	On-Site:	✓
No. of Exercises:	15	Public:	✓
No. of Sections:	30		
No. of Pages:	800		
Webpage:	https://www.seercomputing.com/essential-css3-training-course.php		

Synopsis for Essential CSS 3 training course

This course is offered as a public course or we can come to your venue, it provides four days learning CSS 3 and its intricate techniques

The purpose of this course is to help you build flexible and stunning websites using CSS 3, some HTML knowledge will be useful but the course concentrates on using CSS to make presentable and eye catching websites. The course covers good development techniques and all of the major aspects of this exciting rendering language.

Content highlights (Just a small list from a large course coverage ...)

Grids
Creating layers
Text styling and decoration
Creating pop-ups and overlays
Positioning and aligning Objects
CSS for multiple platforms
Pseudo elements and classes

Exercise highlights (You get to practice what we preach! ...)

Input forms using CSS
Creating dynamic sizing webpages
Overlaying images and containers
Using Counters in CSS
Using :hover to change website appearance

<https://www.seercomputing.com/files/index-essential-css3-training.pdf>
<https://www.seercomputing.com/files/example-essential-css3-training.pdf>
<https://www.seercomputing.com/files/exercise-essential-css3-training.pdf>

Essential JavaScript

Duration:	4 Days	On-Site:	✓
No. of Exercises:	16	Public:	✓
No. of Sections:	31		
No. of Pages:	660		
Webpage:	https://www.seercomputing.com/essential-javascript-training-course.php		

Synopsis for Essential JavaScript training course

This course is offered as a public course or we can come to your venue, it provides four days learning JavaScript and its programming techniques

The purpose of this course is to help you build flexible websites using dynamic JavaScript, the course covers good programming practices and techniques, armed with these skills you can produce the output whatever your design.

Content highlights (Its all good but here are a few ...)

JavaScript Arrays
Conditional JavaScript Statements
Regular Expressions (REGEX)
Exception Handling
Using Switch in JavaScript
JavaScript Datatypes
For In, ForEach and For Of looping in JavaScript

Exercise highlights (Loads of exercises including ...)

Creating innerHTML output using JavaScript
Creating Cookies
Creating Forms dynamically
Error handling in JavaScript
Reacting to events in JavaScript

<https://www.seercomputing.com/files/index-essential-javascript-training.pdf>
<https://www.seercomputing.com/files/example-essential-javascript-training.pdf>

Essential SQLite 3

Duration:	3 Days	On-Site:	✓
No. of Exercises:	12	Public:	✓
No. of Sections:	24		
No. of Pages:	550		
Webpage:	https://www.seercomputing.com/essential-sqlite3-training-course.php		

Synopsis for Essential SQLite3 training course

SQLite has become the standard Database for use in Android and Apple Apps.
This course breaks down the usage of SQLite for storage and retrieval of data

Contents highlights

Database Objects including Tables, Views and Triggers
Running SQL in SQLite
Creating Indexes for Tables
Manipulating data in an SQLite Database
Introduction to SQLiteStudio software
Querying from Multiple Database Tables

Exercise highlights

Controlling DML with Table Triggers
Using Ansi/99 joins between tables
Limiting records with where clauses and fetch
Creating Database Tables, Views etc

Consultancy Services

These next pages break down the various Consultancy services we can offer you and your Organisation.

We have already broken down the bespoke App development we can provide for you, here we list the other Services we can provide, whether it's for an Oracle Database or a system of data which needs an experienced eye to review.

Oracle Consultancy

Our Oracle consultancy service revolves around delivering best practice solutions to Companies implementing new Projects or merely improving on existing systems.

Seer Computing Oracle consultancy team have worked on projects of all sizes, budgets and time scales (From an 18 month FTSE 100 Data Warehouse / Datamart project to a SME 1 month legacy system conversion).

To meet your goals without any major obstacles use Seer Computing's experience to your advantage.

Think about using Seer Computing instead of contract staff, the benefits are obvious:

- Employed only when you need the work done
- Guaranteed quality of work
- Replacements or additional staff readily available
- No agents to deal with (and no agent fees to pay)
- Development done on or off site
- No interviewing or CV sifting

If you are interested in any of the services please do not hesitate to contact us. If the area that you are interested in is not listed, it does not mean that we do not offer solutions in that area. It is simply not possible to detail all the services that we offer; please contact us to outline your exact requirements.

Oracle Consultancy

Choose Seer Computing and enable:

- The delivery of best practice MIS solutions
- Your business to be driven forward
- Your project to be delivered within budget and time scales
- Value to be added in all business areas
- Your company competitiveness to be improved
- Company systems to function more efficiently and effectively

Friendly and prompt advice when you need it

Our Consultants can help you with the following:

Database configuration and maintenance
Application Server configuration and maintenance
Data Warehouse and Data Mart design
Project Management
Database Procedures
Designer Setup and Management
Version Control Management
Legacy System conversions
Oracle Training

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: consultancy@seercomputing.com

Web: <https://www.seercomputing.com>

Oracle Development

We are able to offer clients a "one stop shop" for Oracle projects. Not only can we train your staff in Oracle but we can also provide additional staff and backup when you need it.

This offers clients a number of distinct advantages:

- One common point of contact for clients

- No breakdown of communication between

- Consultants and Developers

- Same methodologies practised by both parties

- Minimum logistical issues

- Value - The only charges are time and materials

- Speed - No lengthy recruitment procedures

- Expertise - You have the knowledge of the whole team not an individual

- Flexibility - Work can be staged (and as a result, charges) according to your project needs

In addition to the services that complement our Consultancy solutions, we also offer component Oracle development services in a number of areas, including:

- Report writing

- Form design

- Database and front end design

- Discoverer Administration

Seer House 142 Walter Road Swansea SA1 5RW

Oracle Development

If you have any Oracle projects that are currently running or in the planning stage, contact Seer Computing to see if you can benefit from our Oracle experience.

Friendly and prompt service when you need it

- System and Module testing
- Code reviews
- Data conversion exercises
- Database Object creation
- Discoverer End User Layer creation and maintenance
- Discoverer workbook creation
- Form creation and amendment
- Report creation and amendment
- Centralisation and modernisation
- Destruction testing
- General System overview

Data Consultancy

Your Data is our Business. Seer Computing can build, advise and de-construct your Data, read our humorous take on Data Management - 'Data Dog'

Data is for the life of your business, not just for Christmas !

You spend lots of time, money and resource collecting it. You store it. You use it. It's your company's lifeline. You base projections on it, make business decisions on the basis of it. But, do you know the condition of it and what it could really achieve for you?

We have a team of specialist consultants who help businesses realise the full potential and true value of their business information systems and management information.

Drawing together a Company's data-flow, we specify and develop usage and future performance strategies, help to restore confidence in the quality of your data, and tell you how it can make more

Data Consultancy

effective business decisions and increase fiscal success.

Whether you're working with a legacy system or need a complete data re-focus, it's time to contact us.

Seer House 142 Walter Road Swansea SA1 5RW

Data Dog

Business Intelligence with Seer Computing

Here at Seer Computing we feel that Business Intelligence sometimes seems to take on a will of its own, that's why we've conceived "Data Dog", a representation of the obstacles and trials faced by Companies managing a Business Intelligence strategy.

The early days of Business Data

When you first start your business... your data is small and manageable.

It's cute and cuddly and you are in control.
You probably keep all your CRM data in a spreadsheet because you don't need to share it or analyse it

Data getting out of hand

But as your business grows then the amount of data increases, it may even get to the stage where the amount of data is overwhelming.

So you start thinking about Databases ... so you need a Company who understands Data and Business

Data, data, data everywhere

It may even get to the stage where the amount of data is overwhelming, you have many files, maybe in different formats, probably duplicated at least once or twice ... or more

...

So much data, difficult to see the wood for the trees.

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: consultancy@seercomputing.com

Web: <https://www.seercomputing.com>

Data Dog

You need to get your Data working for you

Maybe you cant get the Information you need from your data, it needs to be organised, it needs to be fit for purpose

It needs to work for you
You need Seer Computing to coach your data.

Flabby data runs slow !

Maybe the Information takes too long to retrieve, if you have your data in a different formats and then need to get information from it, it will take forever !

Talk to Seer Computing about your options for Databases

Is your Data accurate and timely

Confuscious say man with one watch always knows the time, man with two watches ... never too sure

If you have duplicated data or data which is entered without validation, how can you trust it ? Will it bring back things you dont want ?

Lets get your Data fighting fit

What you need to do is call Seer Computing, we've been training data for many years.

We'll get your data sitting up

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: consultancy@seercomputing.com

Web: <https://www.seercomputing.com>

Data Dog

Data professionally analysed

Begging

Data which is professionally organised is Data you can trust to behave, data you can believe

Its your Data ... Own it !

and rolling over !!

Data which is properly organised is an asset to your Business, badly behaved Data can give you information you haven't any confidence in ... How can you make informed decisions with that ???

Data at your fingertips

and everyone elses ? In the modern world your Data may need to be shared with the rest of the world, Seer Computing can design and build your business App in both Android and iOS

Seamless linking to your Database sharing your information with everyone who has an interest in it

Data cleaned and sanitised

We can help you with your data cleansing ...

If your data has become untidy and unruly, Seer Computing can cleanse this data, remove invalid data, duplicate data, irrelevant data

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: consultancy@seercomputing.com

Web: <https://www.seercomputing.com>

Data Dog

Data corrected and stored correctly

and advise on tidying your data and data storage.

Seer Computing can redesign the storage tables and advise for the future

Dynamic Data needs Data Warehousing

Fast changing data needs to be controlled, a moving target cannot give accurate information, therefore large amounts of Data should be organised into Data Marts or Warehouses.

Talk to Seer Computing to develop a Data Warehousing strategy.

Seer House 142 Walter Road Swansea SA1 5RW

Tel: +44 (0) 800 157 7519

Email: consultancy@seercomputing.com

Web: <https://www.seercomputing.com>

Data Warehousing

In order to survive in today's constantly changing environment, business must be able to sift through the vast amounts of data that is available to them (internal and external data) in order to make informed strategic decisions.

There is a clear correlation between successful companies and successful decision making.

A Data Warehouse is a collection of Company data, derived directly from an operational MIS (Management information system) combined with some environmental data from external data sources.

External data sources can vary from anything such as demographic data to weather cycles.

Access is normally provided through rich end user tools (Such as Oracle Discoverer or Business Objects), where users can access reports and analyse data in order to make informed strategic decisions.

Data Warehousing

Its specific purpose is to support business decisions and not business operations.

There is no doubt that a successfully operating Data Warehouse can be a clear competitive advantage to a Company
(Information is, after all power).

Seer Computing Ltd has experience of building Data Warehouses right through the project life cycle. We can help design, build, operate and maintain of both Data Warehouses and Data Marts.

Project Management

Unfortunately a large percentage of IT Projects still fail.

One of the main reasons for Project failure is because of inadequate Project Management.

In order for a Project to be successful Project Management controls not only need to be in place but have to be adhered to throughout the Project life cycle.

Research has shown that there is a definite correlation between Project success rate and good Project Management skills.

Seer Computing's Project team has extensive and in-depth project management experience in many industries and with many different Oracle applications by managing and participating in high profile, cutting edge projects.

Project Management

Our consultants have harnessed these skills and experience to produce a robust and solid project management solution that is suitable for most industries and Oracle applications.

Combining the rich functionality of the Oracle toolset with a prototyping approach to development can produce high quality applications within a controlled environment.

Our Project Management solution is incredibly flexible and really depends on the amount of support that you require.

Consultants are available for anything from a one day consultation to a full time Project Management role.

Most clients chose to use our Project team in a mentoring role, working in conjunction with the Project Manager for between 1 to 4 days a month.

Discoverer Consultancy

Let your Users loose in the Database? Not quite, but what Discoverer allows you to do is to control the users access to the Database but at the same time empower them to help themselves to the Data.

Self Service reports for the Database? Not quite, but Discoverer with skilful planning and implementation means your users can resolve their Data queries without the need to get into the former routine of raising requirements, specifying output, waiting for the reports to be produced and finally accepting the finished article, thereby speeding up resolution of the requirement and freeing programming staff for other implementations.

Using Discoverer, data access can be rolled out so much quicker (and importantly removed just as quick), changes can be made within hours of requests being made, the result is happier users and more control over the reporting interface.

The drawbacks? Well Discoverer has maintenance overheads as all software does, it also needs to be finely tuned to get the most efficient usage of the product but on the whole it's a win-win situation for both the User and the Developer.

Discoverer Consultancy

Seer Computing Ltd can help you establish your Discoverer End User Layer, configure it for your environment and provide assistance and consultancy in both the implementation and the maintenance of the product. We can produce standard templates of Discoverer Workbooks to enable you to 'roll out' Discoverer with standard reports already in place.

We provide continuing assistance for all delegates who have attended our Discoverer courses; this is free of charge giving advice over email and phone on setup and Worksheet production issues.

Finally we provide after care consultancy for Discoverer Administrators, giving End User Layers a health and efficiency check after a few months of live implementation to ensure you get the very best from your Discoverer setup.

Discoverer Consultancy

To enable you to get the best out of Discoverer, Seer Computing Ltd can provide the following ...

Discoverer User and Administrator Training Courses

Customised half day training for 'high level users'
using your existing EUL and data

Health Reviews of existing End User Layers

Tuning and advice regarding End User Layers

Production of Standard Workbooks

Support and Consultancy

Setting up of End User Layers and Implementation

Mentoring of Discoverer Administrators

Maintenance of End User Layers freeing your
Development staff for other areas

Thank you for choosing Seer Computing

Terms and Conditions

1. The Training

Under this Agreement Seer Computing Limited ("Seer") will provide to the Purchaser a training course (the "Training") for the Purchaser's employees, and/or delegates (the "End Users"). During the provision of the Training Seer may provide the Purchaser with training materials (the "Training Materials") and/or audio visual media.

2. Applicability

This Agreement constitutes the entire agreement between the parties in respect of the subject matter and supersedes all or any representations, understandings, agreements or arrangements prior to the date hereof. No modification or alteration to the terms hereof shall have effect unless the same is agreed in writing and signed by our duly authorised representative. No conduct by us, our employees, agents or subcontractors shall be deemed to constitute acceptance of any terms put forward by you. All orders are accepted at our discretion there is no obligation upon Seer to accept any order. The Purchaser undertakes to bring these terms and conditions to the attention of the end users.

3. Delivery

Training will commence on the date specified by Seer in the confirmation acceptance issued to the Purchaser. Seer shall not be liable for any costs or damages suffered by the Purchaser or delegates as a result of any delays in delivery or the cancellation or postponement of the Training. There may be times where events beyond our control prevent Seer from supplying the Training on the agreed date. If this occurs, Seer will inform the Purchaser of the problem and arrange an alternative date to provide the Training.

4. Cancellation Charges

The Purchaser agrees to pay Seer the following charges in the event that a course is cancelled by the Purchaser or an end user fails to attend or withdraws from a course without providing at least ten (10) working days written notice prior to the scheduled start date of the course:

Written Notice	Cancellation Charge
6-10 days	50%
1-5 days	100%

5. Out of Office Premium

The Purchaser agrees to pay an agreed premium on the standard price for Training run outside the hours of 0900-1730 Monday to Friday.

6. Payment Terms

A deposit fee is payable on all course provided before the commencement date of the Training with the remaining fee payable within thirty (30) days of the date of Seer's invoice. Seer reserves the right to charge the Purchaser additional fees if additional end users to those originally listed on the order form, (but not substitutions) attend any Training. Such additional places shall be charged in accordance with Seer's then current Price List. If payment of any part of the fees are not made in accordance with the above, Seer shall be entitled to charge the Purchaser interest, at the rate of 8% per annum above the base rate of The Cooperative Bank plc, from time to time in force which shall be calculated and accrue on a day to day basis from the date upon which payment of such invoice became overdue until the day on which Seer receives payment of the same in full in cleared funds.

7. Warranty

Seer warrants to the Purchaser that:

- (a) the Training will be provided with reasonable care and skill.
- (b) the Training and the Training Materials providing under this Agreement and any Intellectual Property Rights therein or relating thereto will not infringe the rights of any third party.
- (c) the Training Materials and audio visual media owned by Seer will be free from defects under normal proper use in their original condition for a period of 90 days. If found defective by Seer, Seer's sole obligation shall be to repair or replace (at its option) the defective product. If Seer determines that the product is not defective, the Purchaser shall pay all costs of handling and return transportation. All replaced products become the property of Seer. Seer shall not be liable for any errors or omissions in any material supplied by Seer.
- (d) It will keep confidential all of the Purchaser's confidential information except when such information is already in the public domain or if Seer is required to reveal such information by law.

8. Limitation of liability

Seer shall not be liable to the Purchaser:

- (a) for any damage or loss resulting from the provision of the Services.
- (b) for breach of contract, tort or breach of statutory duty or in any other manner for consequential or indirect loss, special damage, loss of profit or of any contract or any other loss of whatsoever nature suffered by the Purchaser.
- (c) in the event of any delay and/or failure by the Purchaser in performing any of its obligations under this Agreement.

Seer's total liability for all claims arising out of this Agreement (whether due to negligence or otherwise) shall not exceed the total value of the Agreement between us or, where you have agreed to make payments in instalments, the amount you paid to us at the time you made any claim or to the limit of £25,000 whichever is the lower, irrespective of the number of claims made. Nothing in this agreement shall be construed as limiting or excluding Seer's liability for death or personal injury resulting from Seer's; its officers', employees', agents' or sub-contractors' negligence (as defined in Section I of the Unfair Contract Terms Act 1977).

9. Intellectual Property Rights

The Purchaser recognises that all intellectual property rights ("IPR") in respect of the Training and Training Materials belong and shall remain the absolute property of Seer. The Purchaser agrees not to infringe or allow to be infringed by any third party Seer's IPR. ("IPR" means all or any rights in designs, trademarks, utility models (whether registered or unregistered) applications for any of the foregoing, together with the right to apply anywhere in the world; copyrights, design rights, database rights, topography rights, trade names, trade secrets, know-how, rights to confidential information; licenses or consents in relation to any of the foregoing and all or any similar or equivalent rights arising or subsisting in any country of the world).

10. Indemnity

The Purchaser shall indemnify Seer in respect of all actions, proceedings, damages, costs, expenses (including legal costs and expenses) and other liabilities incurred by Seer arising:

- (a) as a result of any failure by the Purchaser to make payments in accordance with the provisions herein contained (including, without limitation, any costs incurred by Seer or its agents in the collection of any monies due); and
- (b) from any infringement of any third party intellectual property rights.

11. Termination

Seer shall be entitled to terminate this Agreement at any time prior to the commencement of the Training if the Purchaser:

- (a) fails to make payment of an invoice rendered within 30 days;
- (b) commits a material breach of this Agreement;
- (c) becomes insolvent (within the meaning of section 123 of the Insolvency Act 1986) or bankrupt (within the meaning of section 123 of the Insolvency Act 1986);
- (d) upon notice sent out prior to the commencement date of the Training.

12. General

Any delay or failure on Seer's part in enforcing its rights or remedies hereunder shall not be construed as a waiver of such right or remedy. The Purchaser shall not, without the prior written consent of Seer, assign, delegate, transfer, subcontract or otherwise dispose of any of its rights or obligations under this Agreement. If any provision of the Conditions is held by any court of competent authority to be void or unenforceable it shall be deleted and the remaining provisions shall continue in full force and effect and if necessary be amended so far as may be required to give effect to the spirit of the Conditions. The parties do not intend that any term of this Agreement shall be enforceable, by virtue of the Contract (Rights of Third Parties) Act 1999 by any third party who is not a party to this Agreement. This Agreement is to be governed by and construed according to English law and the parties agree to submit any disputes to the exclusive jurisdiction of the English courts.
