

Implicit Cursors - Using Implicit Cursors to Select Records

Insert, delete or update cursors are identical to those used in SQL, however Select statements are different because the selection must be assigned to a variable using the 'into' clause ..

declare

```
l_driver      com_drivers.driver_name%type;  
l_driver_desc com_drivers.driver_desc%type;
```

begin

```
select driver_name, driver_desc  
into l_driver, l_driver_desc  
from com_drivers;
```

end;
