

From Oracle 12c the Default Value has been extended so that it can now use a sequence, the prime use of this would be for generating unique identifiers for primary keys etc ...

```
create table numbers  
( id number(10) default num_seq.nextval  
,value varchar2(30) )
```

If a null value has been specified the Developer can specify ...

```
create table numbers  
( id number(10) default on null num_seq.nextval  
,value varchar2(30) )
```
