

Similar syntax to a Function except that a 'return' is not specified, the return 'occurs' within the 'passed parameters', providing the parameters are specified as 'OUT'

```
create or replace procedure <procedure_name>  
(<passed_variables> in <datatype>, ..... ) is  
  
  <local_variables>;  
  
  begin  
      <processing>;  
end;
```

A similar naming convention to Functions is suggested, except the end of the procedure to be PROC or PRO

Procedures - Example of Procedures in Oracle

*create or replace procedure print_line
(p_message in varchar2 := 'No Message passed') is*

begin

dbms_output.put_line(p_message);

end;
