

Regex – Case Sensitivity

If the User had used a capital 'I' or 'C' the statement will result in an error ...

The screenshot shows the SQL Developer interface. The top pane is the 'Query Builder' with the following SQL query:

```
select mem_name
from membership
where regexp_like(mem_name, 'AN', 'C');
```

The bottom pane is the 'Query Result' window, which displays an error message:

```
ORA-01760: illegal argument for function
01760. 00000 - "illegal argument for function"
*Cause:
*Action:
```
