

Manipulating SQL Output - Functions

The function does not replace the column, merely surrounds it.

This example uses the `initcap` function which capitalizes the first character of each word in a `Varchar2` column ...

```
SELECT C65_MEMBER_ID as "Member ID",  
       C65_LOCATION_ID,  
       initcap(C65_MEMBER_SURNAME),  
       C65_MEMBER_NAME,
```

Query Result x

SQL | Fetched 50 rows in 0.014 seconds

	Member ID	C65_LOCATION_ID	INITCAP(C65_MEMBER_SURNAME)	C65_MEMBER_NAME
1	3	3	Thomas	MIKE
2	6	6	Howells	BETTY
3	7	7	Baker	RICHARD
