

## Constraints/Indexes – Primary Key Creation in SQLcl

There are a number different methods to create a Primary Key, for example when the table is created initially or as a separate command when creating the table or later in its lifecycle. The syntax for creating a primary key within the create table is as follows ...

```
Worksheet | Query Builder
-----|-----
- create table car_manufacturer
  (cm_id number(8) not null
  ,cm_name varchar2(40) not null
  ,cm_address varchar2(400)
  ,constraint cm_pk primary key
  (cm_id) enable);
```
