

SQLcl – Displaying all Environment Settings

Before the Environment settings are examined, the User can issue the command 'sho all' (show all) will display all the current settings ...

The screenshot shows the SQLcl interface with the 'Query Builder' tab active. The command 'sho all' is entered in the query area. Below the query area, the 'Script Output' window is open, displaying the following output:

```
_prelim OFF
appinfo is OFF and set to "SQL Developer"
arraysize default
autocommit OFF
autoprint OFF
autotrace OFF
```
