

Exercise Seven

7.1 The course directory contains a file called ex7_1a.sql, it is a copy of the utilities package created in an earlier exercise. Look at the metadata source table, user_source and view the current code for the package called utilities

```
select text from user_source where name = 'UTILITIES';
```

```
TEXT
```

```
-----  
package utilities as
```

```
    cursor get_section_cursor(c_in number) is  
        select sd_section_name  
        from section_details  
        where sd_section_number = c_in;
```

Exercise Seven

7.1 continued. Wrap the file ex7_1a.sql as ex7_1a.plb

```
select text from user_source  
where name = 'UTILITIES';
```

TEXT

*package utilities wrapped
package body utilities wrapped*
