

Exercise Six

6.1 Using Regex symbols, create a PLSQL process which loops through the contacts table and selects only those which have a number as the first digit in the Postcode.

Save as c:\course\ex6_1.sql

Use regexp_like within the process.

This postcode starts with a numeric value - 0119 2DD

This postcode starts with a numeric value - 0E98 1BA

This postcode starts with a numeric value - 302 4BR

Exercise Six

6.2 Using the previous process, select from the contacts table all records which have uppercase characters as the first two characters in the City column.

Save as c:\course\ex6_2.sql

This City has two uppercase characters - LEOMINSTER

This City has two uppercase characters - ST. Marys

This City has two uppercase characters - OXford

This City has two uppercase characters - NEwburgh

This City has two uppercase characters - WORcester
