

Exercise Two

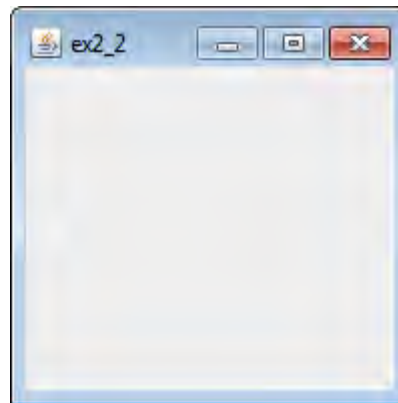

2.1 Create a new class called ex2_1.

Create a basic JFrame and run it, close it using Ctrl and C

2.2 Copy ex2_1 and name it ex2_2. Set the size of the JFrame to 200 by 200, set the default close operation, set the title and center the JFrame on the screen ...

Exercise Two

2.3 Using ex2_2 and copying it to ex2_3, convert it to a Constructor structure and display the JFrame twice but with different sizes (pass a Dimension when creating) and titles ...
