

# Exercise Ten

10.1 Create a new Project called exercise\_10 with a package called exercise\_10. Copy ex9\_2 and rename as ex10\_1, convert the private listener to a public listener. Test to prove it works as ex9\_2.

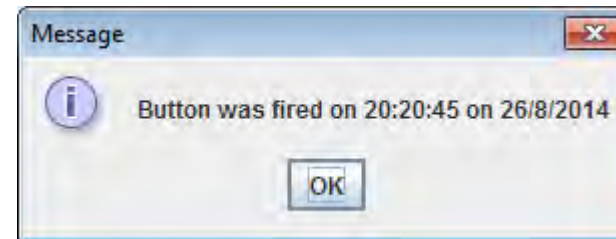

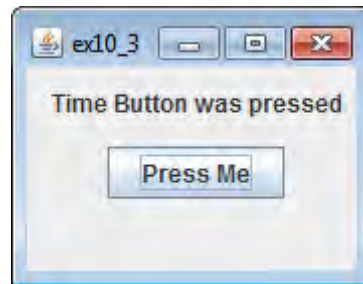

10.2 Copy ex9\_4 and rename as ex10\_2, convert the private listeners to a single public listener. Test to prove it works as ex9\_4.

# Exercise Ten

10.3 Copy ex9\_2 and rename as ex10\_3, convert the private listener to an implemented listener, this necessitates changing the class to a Constructor (if not already done). Test to prove it works as ex9\_2.

10.4 Copy ex10\_2 and rename as ex10\_4, convert the public listener to an implemented listener, again this may necessitate changing the class to a Constructor. Test to prove it works as ex10\_4.
