

## Exercise Three

---

3.1 Create a new module in Forms 11g.

3.2 Create a data block based on the SECTION\_DETAILS table, this is to be the new Master block, therefore it is recommended that the Block is created for one record only in Form layout with the following columns ...

- sd\_section\_number
- sd\_section\_name
- sd\_section\_type

Hint: The item labels or boilerplate can be amended either in the items Property Palette or by double clicking on the boilerplate itself in the Layout Editor.

Note that the frame property of Update Layout must be switched to 'Manually'.

Save the module as c:\course\ex3\_2

A screenshot of the Oracle Forms 11g Layout Editor. The window title is "Section Details". Inside the editor, there are three text input fields. The first field is labeled "Section Number" and contains the text "SD\_SECTION\_NUMBER". The second field is labeled "Section Type" and contains the text "SD\_SECTION\_TYPE". The third field is labeled "Section Name" and contains the text "SD\_SECTION\_NAME". The fields are arranged in a vertical stack within a rectangular frame.
