

## Exercise Five

---

5.2 The following output is as a result of joining the Products, Products Group and Products Sales tables together. The Products Group and Products table join together using the PGR\_GROUP\_NUMBER and PRO\_GROUP\_NUMBER, the Products and Products Sales tables join together using the PRO\_PRODUCT\_NUMBER and the PSS\_PRODUCT\_NUMBER.

The purpose of this query is to display the total number of sales for all Products within all Groups, therefore aggregation must also be used, otherwise nearly fifty thousand individual records will be displayed!

Save as c:\course\ex5\_2.php

The following page displays the expected result, use either Ansi 86 or Ansi 99 joining conventions to achieve this.
