

Exercise Nineteen

19.1 The next exercise will use Conditional Compilation, first create a procedure called `display_date` which will output today's date using `dbms_output`.

Save as `c:\course\ex19_1.sql`

execute display_date

05-Jun-20

Exercise Nineteen

19.2 Using Conditional compilation, create a test within `display_date` to test at compilation time.

If the test is set to true then display the user as well as the current date.

```
execute display_date  
APLSQL1000_USER  
05-Jun-20
```

19.3 Compile the process `c:\course\ex19_3.sql` this will compile and execute perfectly well.

Enable `plsql_warnings` and recompile the code, observe the error message.
