

# Exercise Thirteen

These following exercises can be done either using DBMS\_SQL or Execute Immediate, or a mixture of both methods, the solutions to the exercise will contain both versions.

13.1 Create a procedure to loop through each sequence in your schema setting the nextval to 9966. Save as c:\course\ex13\_1.sql.

13.2 Create a procedure to loop through each trigger in your schema and disable each in turn. Save as c:\course\ex13\_2.sql

13.3 Modify 13.2 to either enable or disable all triggers according to a parameter passed at execution. Save as c:\course\ex13\_3.sql
