

Exercise Two

2.1 Ascertain how many tables there are in your schema.

2.2 Describe the Store_Locations table.

2.3 Describe the Order_Details table.

2.4 Switch on the spool facility, naming the file c:\course\2_4 and describe the Stock_Information table, stop the spool and examine the spool file.

2.5 Using the Order_Details table, select the columns od_order_number and od_order_date.

```
OD_ORDER_NUMBER  OD_ORDER_
-----
1 01-JAN-01
2 01-JAN-01
3 02-JAN-01
4 04-JAN-01
```

2.6 Display a count of all records in the Stock_Information table.

2.7 Select all columns from the Section_Details table, switching the wrap environment off if necessary.
