

## Essential PLSQL for Oracle 18c

| Section      | Title   | Page      |
|--------------|---|-----------|
| <b>One</b>   | <b>PL/SQL Introduction</b>                                | <b>2</b>  |
|              | - Procedural Language for SQL                             | 3         |
| <b>Two</b>   | <b>PL/SQL Structure</b>                                   | <b>5</b>  |
|              | - Basic Structure of PLSQL                                | 6         |
|              | - The Declaration Section in PLSQL                        | 7         |
|              | - Local Variables in PLSQL                                | 8         |
|              | - Naming Local Variables in PLSQL                         | 10        |
|              | - Quoted Identifier Variables                             | 12        |
|              | - Variable Datatypes (varchar2)                           | 16        |
|              | - Variable Datatypes (numbers)                            | 17        |
|              | - Variable Datatypes (number)                             | 18        |
|              | - Variable Datatypes (decimal)                            | 21        |
|              | - Variable Datatypes (integer)                            | 22        |
|              | - Variable Datatypes (pls_integer)                        | 23        |
|              | - Variable Datatypes (binary_integer)                     | 24        |
|              | - Variable Datatypes (natural)                            | 25        |
|              | - Variable Datatypes (naturaln)                           | 26        |
|              | - Variable Datatypes (positive)                           | 27        |
|              | - Variable Datatypes (positiven)                          | 28        |
|              | - Variable Datatypes (signtype)                           | 29        |
|              | - Variable Datatypes (simple_integer)                     | 30        |
|              | - Variable Datatypes (boolean)                            | 31        |
|              | - Variable Datatypes - Constants                          | 32        |
|              | - Running PLSQL in SQL*Plus                               | 34        |
|              | - Compiling PLSQL in SQL*Plus                             | 36        |
|              | - Common Compilation Problems                             | 39        |
|              | - Commenting PLSQL  | 41        |
|              | - Documenting PLSQL                                       | 43        |
| <b>Three</b> | <b>The SQL Plus Interface</b>                             | <b>44</b> |
|              | - Introduction  | 45        |
|              | - Anatomy of SQL Plus                                     | 50        |
|              | - ORA-01017: invalid username/password; logon denied      | 51        |
|              | - ORA-12154: TNS:could not resolve the connect identifier | 52        |
|              | - Exiting an SQL Plus Session                             | 53        |
|              | - Using the DOS Window                                    | 54        |
|              | - Copying and Pasting                                     | 55        |
|              | - Using the Function Keys                                 | 58        |
|              | - Using the Line Editor in SQL Plus                       | 59        |
|              | - Using the Editor in SQL Plus                            | 60        |
|              | - SQL Plus Environment Settings                           | 61        |
|              | - File Manipulation in SQL Plus                           | 62        |
|              | - Spooling Results in SQL Plus                            | 63        |
|              | - Changing Passwords / Clearing the Screen in SQL         | 64        |
|              | - <i>Exercise One</i>                                     | 65        |
| <b>Four</b>  | <b>Performing Simple DML in PLSQL</b>                     | <b>67</b> |
|              | - Introduction  | 68        |
|              | - Using Local Variables                                   | 69        |

## Essential PLSQL for Oracle 18c

| Section       | Title   | Page       |
|---------------|---|------------|
|               | - Declaring Variables Using %Type                 | 72         |
|               | - Using Substitution Values in PLSQL              | 76         |
|               | - <i>Exercise Two</i>                             | 79         |
| <b>Five</b>   | <b>Performing Conditional Statements in PLSQL</b> | <b>81</b>  |
|               | - If .. Then Statements                           | 82         |
|               | - If .. Then Else Statements                      | 85         |
|               | - If .. Then Elself Statements                    | 87         |
|               | - Combining Tests                                 | 88         |
|               | - Nesting Conditions                              | 89         |
|               | - Boolean Conditions                              | 90         |
| <b>Six</b>    | <b>- Section Six - Communicating from PLSQL</b>   | <b>91</b>  |
|               | - Messaging Via PLSQL                             | 92         |
|               | - <i>Exercise Three</i>                           | 97         |
| <b>Seven</b>  | <b>Exception Handling</b>                         | <b>99</b>  |
|               | - Introduction                                    | 100        |
|               | - The When clause                                 | 103        |
|               | - The When Others clause                          | 106        |
|               | - Raise_Application_Error                         | 108        |
|               | - Oracle Defined Exceptions                       | 112        |
|               | - Raising User Defined Exceptions                 | 113        |
|               | - Pragma Exceptions in PLSQL                      | 116        |
|               | - Grouping Exceptions in PLSQL                    | 120        |
|               | - Alternative Way to Handle SQL Errors in PLSQL   | 121        |
|               | - Handling SQL Errors in PLSQL                    | 122        |
|               | - Advanced SQLErrm                                | 124        |
|               | - <i>Exercise Four</i>                            | 125        |
| <b>Eight</b>  | <b>Implicit Cursors</b>                           | <b>128</b> |
|               | - Using Implicit Cursors in PLSQL                 | 129        |
|               | - Using Implicit Cursors to Select Records        | 131        |
|               | - Exceptions in Implicit Cursors                  | 132        |
|               | - Attributes of Implicit Cursors                  | 134        |
|               | - SQL%FOUND                                       | 135        |
|               | - SQL%NOTFOUND                                    | 136        |
|               | - SQL%ROWCOUNT                                    | 137        |
| <b>Nine</b>   | <b>Sub-Blocking in PLSQL</b>                      | <b>138</b> |
|               | - Introduction                                    | 139        |
|               | - Defining  | 140        |
|               | - Re-Raising Exceptions in PLSQL                  | 142        |
|               | - <i>Exercise Five</i>                            | 145        |
| <b>Ten</b>    | <b>Explicit Cursors</b>                           | <b>149</b> |
|               | - Using Explicit Cursors in PLSQL                 | 150        |
|               | - How Explicit Cursors Work                       | 152        |
|               | - Attributes of an Explicit Cursor                | 155        |
|               | - Passing Parameters to Explicit Cursors          | 158        |
|               | - Explicit Cursors Versus Implicit Cursors        | 161        |
|               | - <i>Exercise Six</i>                             | 162        |
| <b>Eleven</b> | <b>Using Sequences in PLSQL 18c</b>               | <b>165</b> |
|               | - Using Sequences in PLSQL 18c                    | 166        |

## Essential PLSQL for Oracle 18c

| Section          | Title  | Page       |
|------------------|--|------------|
|                  | - Using Sequences in PLSQL 18c                       | 167        |
| <b>Twelve</b>    | <b>Loop Processing</b>                               | <b>168</b> |
|                  | - Iterative Processing in PLSQL                      | 169        |
|                  | - Basic Looping in PLSQL                             | 170        |
|                  | - While Looping in PLSQL                             | 174        |
|                  | - For Looping in PLSQL                               | 177        |
|                  | - Using Dates in For Loops in PLSQL                  | 181        |
|                  | - Using Characters in For Loops in PLSQL             | 182        |
|                  | - Implicit Cursor For Looping in PLSQL               | 183        |
|                  | - Explicit Cursor For Looping in PLSQL               | 186        |
|                  | - Using other Loops with Explicit Cursors            | 188        |
|                  | - Loop Labels in PLSQL                               | 191        |
|                  | - Loop Continue and Continue When                    | 193        |
|                  | - <i>Exercise Seven</i>                              | 197        |
| <b>Thirteen</b>  | <b>PL/SQL Database Objects</b>                       | <b>203</b> |
|                  | - PLSQL Objects                                      | 204        |
|                  | - Compiling PLSQL Objects                            | 205        |
|                  | - Metadata For PLSQL Objects                         | 206        |
|                  | - Re-Compiling PLSQL Objects                         | 207        |
|                  | - Dropping PLSQL Objects                             | 209        |
|                  | - Passing Parameters in PLSQL                        | 210        |
|                  | - Passing Parameters using Positional Notation       | 211        |
|                  | - Passing Parameters Using Named Notation            | 213        |
|                  | - Using Mixed Notation in SQL                        | 214        |
|                  | - Metadata (User_Source)                             | 216        |
|                  | - Describing PLSQL Objects in SQL*PLUS               | 217        |
| <b>Fourteen</b>  | <b>Programmer Defined Functions</b>                  | <b>218</b> |
|                  | - Syntax of Functions in Oracle                      | 219        |
|                  | - Suggested Naming Convention of Functions in Oracle | 222        |
|                  | - Function Example in PLSQL                          | 223        |
|                  | - Running Functions in SQL and PLSQL                 | 225        |
|                  | - Running Functions in Oracle                        | 226        |
|                  | - <i>Exercise Eight</i>                              | 227        |
| <b>Fifteen</b>   | <b>Programmer Defined Procedures</b>                 | <b>231</b> |
|                  | - Syntax of Procedures in Oracle                     | 232        |
|                  | - Example of Procedures in Oracle                    | 234        |
|                  | - Executing Procedures in Oracle within SQL Plus     | 235        |
|                  | - Executing Procedures in Oracle within PLSQL        | 236        |
| <b>Sixteen</b>   | <b>Sub-programming Techniques</b>                    | <b>237</b> |
|                  | - Introduction                                       | 238        |
|                  | - Example  | 239        |
|                  | - <i>Exercise Nine</i>                               | 241        |
| <b>Seventeen</b> | <b>Autonomous Transactions in PLSQL</b>              | <b>244</b> |
|                  | - Introduction                                       | 245        |
|                  | - Example of an Autonomous Transaction               | 247        |
|                  | - Rollback in Autonomous Transactions                | 254        |
|                  | - Using Autonomous Transactions in Triggers          | 255        |

## Essential PLSQL for Oracle 18c

| Section             | Title   | Page       |
|---------------------|---|------------|
| <b>Eighteen</b>     | <b>Packaging Programmer Defined Programs</b>              | <b>258</b> |
|                     | - Syntax of Packages in Oracle                            | 259        |
|                     | - Compiling of Packages in Oracle                         | 264        |
|                     | - Private Processes in PLSQL Packages                     | 265        |
|                     | - Executing Packages in Oracle                            | 267        |
|                     | - Handling Exceptions in Packages in PLSQL                | 268        |
|                     | - <i>Exercise Ten</i>                                     | 270        |
| <b>Nineteen</b>     | <b>DML Triggers in Oracle</b>                             | <b>271</b> |
|                     | - Oracle Triggers Introduction                            | 272        |
|                     | - DML Triggers Introduction                               | 273        |
|                     | - DML Triggers Timing Points                              | 275        |
|                     | - DML Triggers When Conditions                            | 276        |
|                     | - DML Triggers When Conditions Examples                   | 277        |
|                     | - DML Triggers Suggested Naming Conventions               | 279        |
|                     | - Syntax of DML Triggers in PLSQL                         | 281        |
|                     | - Referencing Values within Triggers                      | 282        |
|                     | - Checking the Event which fired the DML Trigger          | 286        |
|                     | - Checking the Event which fired the DML Trigger          | 287        |
|                     | - Using the Follows syntax to dictate Trigger Firing      | 288        |
|                     | - ORA-25022: cannot reference a trigger of different type | 292        |
|                     | - Using the Disable syntax when Compiling Triggers        | 293        |
|                     | - Enabling/Disabling Triggers in an Oracle Database       | 294        |
|                     | - Metadata for Triggers (User_Triggers)                   | 296        |
|                     | - Mutating DML Triggers in Oracle                         | 297        |
|                     | - <i>Exercise Eleven</i>                                  | 301        |
| <b>Twenty</b>       | <b>Rowtypes in PLSQL</b>                                  | <b>308</b> |
|                     | - Using %Rowtype in PLSQL                                 | 309        |
|                     | - Declaring a Variable as a %Rowtype                      | 310        |
|                     | - Referencing a %Rowtype Variable                         | 311        |
|                     | - Populating a Variable which is a %Rowtype               | 312        |
|                     | - Passing a %Rowtype between Processes                    | 315        |
|                     | - Declaring a Cursor %Rowtype                             | 317        |
| <b>Twenty One</b>   | <b>Advanced Cursors in Oracle 18c</b>                     | <b>320</b> |
|                     | - For Update with Explicit Cursors                        | 321        |
|                     | - Where Current Of Explicit Cursors                       | 322        |
|                     | - Example of Updating with Explicit Cursors               | 323        |
|                     | - Using Nowait with Explicit Cursors                      | 324        |
|                     | - Using Skip Locked with Explicit Cursors                 | 325        |
|                     | - Using Wait with an Explicit Cursor                      | 326        |
|                     | - Using Rowid with Explicit Cursors                       | 327        |
|                     | - Using Returning Into in PLSQL                           | 328        |
|                     | - Using Rowtype for DML                                   | 331        |
| <b>Twenty Two</b>   | <b>Savepoints in PLSQL</b>                                | <b>333</b> |
|                     | - Using Savepoints in a PLSQL process                     | 334        |
|                     | - Example of Savepoints in a PLSQL process                | 335        |
| <b>Twenty Three</b> | <b>Case Statements and Case Expressions</b>               | <b>336</b> |
|                     | - Introduction  | 337        |
|                     | - Using Searched Case in PLSQL                            | 338        |

## Essential PLSQL for Oracle 18c

| Section            | Title   | Page       |
|--------------------|---|------------|
|                    | - Using Case in PLSQL                             | 339        |
|                    | - Using Nested Case in PLSQL                      | 340        |
|                    | - Using Case Expressions in PLSQL                 | 342        |
|                    | - Using Nullif in PLSQL                           | 346        |
|                    | - Using Coalesce in PLSQL                         | 347        |
|                    | - <i>Exercise Twelve</i>                          | 348        |
| <b>Twenty Four</b> | <b>File I/O</b>                                   | <b>351</b> |
|                    | - Reading and Writing from the Operating System   | 352        |
|                    | - Accessing the File System using Directories     | 353        |
|                    | - Creating Directories                            | 354        |
|                    | - Simple Write using UTL_FILE.PUT_LINE            | 356        |
|                    | - Simple Read Using UTL_FILE.GET_LINE             | 357        |
|                    | - Additional Functions in the UTL_FILE Package    | 358        |
|                    | - Using UTL_FILE.PUTF in PLSQL                    | 359        |
|                    | - UTL_FILE Exceptions                             | 361        |
|                    | - Using UTL_FILE to perform OS Commands           | 363        |
|                    | - Using UTL_FILE.Fcopy in PLSQL                   | 364        |
|                    | - Using UTL_FILE.Fgetattr in PLSQL                | 365        |
|                    | - Using UTL_FILE.Fremove in PLSQL                 | 366        |
|                    | - Using UTL_FILE.Frename in PLSQL                 | 367        |
| <b>Twenty Five</b> | <b>Dynamic SQL</b>                                | <b>368</b> |
|                    | - Introduction to Dynamic SQL                     | 369        |
|                    | - Native Dynamic SQL (NDS) with Execute Immediate | 370        |
|                    | - NDS Error Handling                              | 373        |
|                    | - NDS with Inputs                                 | 374        |
|                    | - NDS with Output                                 | 376        |
|                    | - Dynamic Cursors and Sys_Refcursor               | 377        |
|                    | - NDS with Outputs                                | 379        |
|                    | - Introduction to DBMS_SQL                        | 380        |
|                    | - DBMS_SQL Example                                | 381        |
|                    | - <i>Exercise Thirteen</i>                        | 382        |
